
THE PERFECT HUMAN/WORLD

Fight Against Mediocrity

Introduction

The world wants to assign you a role in life. And once you accept that role you are doomed. Your power is limited to the tiny amount allotted to the role you have been assigned. Remake yourself into a character of power. Forge a new identity, one of your own making, one that has had no boundaries assigned to it. Aim to reach the ideal in every way possible (physically, emotionally, intellectually, socially, financially, spiritually.)

Virtues

Virtues are habits of mind, heart, and behavior. They develop through deliberate practice. The ancient Greeks considered wisdom to be the master virtue, the one that directs all the others. Wisdom is good judgment. It enables us to make reasoned decisions that are both good for us and good for others. Wisdom tells us how to put the other virtues into practice—when to act, how to act, and how to balance different virtues when they conflict (as they do, for example, when telling the honest truth might hurt someone’s feelings). Wisdom enables us to discern correctly, to see what is truly important in life, and to set priorities. As the ethicist Richard Gula points out, “We cannot do right unless we first see correctly.”

The second virtue named by the Greeks is justice. Justice means respecting the rights of all persons. Since we are persons ourselves, justice also includes self-respect, a proper regard for our own rights and dignity. Schools, in their character education efforts, often center on justice because it includes so many of the interpersonal virtues—civility, honesty, respect, responsibility, and tolerance (correctly understood not as approval of other people’s beliefs or behaviors but as respect for their freedom of conscience as long as they do not violate the rights of others). A concern for justice—and the capacity for moral indignation in the face of injustice—inspires us to work as citizens to build a more just society and world.

A third, much-neglected virtue is fortitude. Fortitude enables us to do what is right in the face of difficulty. The right decision in life is often the hard one. One high school captures that truth in its motto: “Do the hard right instead of the easy wrong.” A familiar maxim says, “When the going gets tough, the tough get going.” Fortitude, as the educator James Stenson points out, is the inner toughness that enables us to overcome or withstand hardship, defeats, inconvenience, and pain. Courage, resilience, patience, perseverance, endurance, and a healthy self-confidence are all aspects of fortitude. Teen suicide has risen sharply in the past three decades; one reason may be that many young people are unprepared to deal with life’s inevitable disappointments. We need to teach our children that we develop our character more through our sufferings than our successes, that setbacks can make us stronger if we don’t give in to feeling sorry for ourselves.

The fourth virtue named by the Greeks is self-control (which they called “temperance”). Selfcontrol is the ability to govern ourselves. It enables us to control our temper, regulate our sensual appetites and passions, and pursue even legitimate pleasures in moderation. It’s the power to resist temptation. It enables us to wait—and to delay gratification in the service of higher and distant goals. An old saying recognizes the importance of self-control in the moral life: “Either we rule our desires, or our desires rule us.” Reckless, self-destructive, and criminal behaviors flourish in the absence of selfcontrol.

The Greeks covered a lot of the moral territory but by no means all of it. A fifth essential virtue is love. Love goes beyond justice; it gives more than fairness requires. Love is the willingness to sacrifice for the sake of another. A whole cluster of important human virtues—empathy, compassion, kindness, generosity, service, loyalty, patriotism (love of what is noble in one’s country), and forgiveness—make up the virtue of love. In his book *With Love and Prayers*, F. Washington Jarvis writes: “Love—selfless love that expects nothing back—is the most powerful force in the universe. Its impact on both the giver and the receiver is incalculable.” Love is a demanding virtue. If we really took seriously the familiar injunction to “love your neighbor as yourself,” says an essay on this virtue, would we not make every effort to avoid gossiping about others and calling attention to their faults, given how sensitive we are to such things said about us?

A positive attitude is a sixth essential virtue. If you have a negative attitude in life, you’re a burden to yourself and others. If you have a positive attitude, you’re an asset to yourself and others. The character strengths of hope, enthusiasm, flexibility, and a sense of humor are all part of a positive attitude. All of us, young and old, need to be reminded that our attitude is something we choose. “Most people,” Abraham Lincoln said, “are about as happy as they make up their minds to be.” Said Martha Washington: “I have learned from experience that the greater part of our happiness or misery depends on our dispositions and not on our circumstances. We carry the seeds of the one or the other with us in our minds wherever we go.”

Old-fashioned hard work is a seventh indispensable virtue. There is no substitute in life for work. “I challenge you,” says the great basketball coach John Wooden, “to show me one single solitary individual who achieved his or her own personal greatness without lots of hard work.” Hard work includes initiative, diligence, goal-setting, and resourcefulness.

An eighth essential virtue is integrity. Integrity is adhering to moral principle, being faithful to moral conscience, keeping our word, and standing up for what we believe. To have integrity is to be “whole,” so that what we say and do in different situations is consistent rather than contradictory. Integrity is different from honesty, which tells the truth to others. Integrity is telling the truth to oneself. “The most dangerous form of deception,” says author Josh Billings, “is self-deception.” Self-deception enables us to do whatever we wish and find a reason to justify our actions.

Gratitude is a ninth essential virtue. “Gratitude, like love, is not a feeling but an act of the will,” observes writer Anne Husted Burleigh. “We choose to be thankful, just as we choose to love.” Gratitude has been described as the secret of a happy life. It reminds us that we all drink from wells we did not dig. It moves us to count our everyday blessings. Asked what was the biggest lesson he learned from drifting 21 days in a life raft lost in the Pacific, the war hero Eddie Rickenbacker answered: “That if you have all the fresh water you want to drink and all the food you want to eat, you ought never to complain about anything.”

Humility, the final essential virtue, can be considered the foundation of the whole moral life. Humility is necessary for the acquisition of the other virtues because it makes us aware of our imperfections and leads us to try to become a better person. “Humility,” writes the educator David Isaacs, “is recognizing both our inadequacies and abilities and pressing our abilities into service without attracting attention or expecting applause.” “Half the harm that is done in the world,” said T. S. Eliot, “is due to people who want to feel important.” “Every virtue turns worthless,” writes the philosopher Dietrich von Hildebrand, “if pride creeps into it—which happens whenever we glory in our goodness.” Without humility, observes another writer, we keep all our defects; they are only crusted over with pride, which conceals them from ourselves. Humility enables us to take responsibility for our faults and failings (rather than blaming someone else), apologize for them, and seek to make amends. The psychiatrist Louis Tartaglia, in his book *Flawless! The Ten Most Common Character Flaws and What You Can Do About Them*, says that in more than 20 years as a therapist he has found the most common character flaw to be “addiction to being right.” (“Do you find yourself discussing disagreements,” he asks, “long after they are finished, just to prove you were right?”) The key to character growth in therapy and life, he says, is simply the humble willingness to change.

For the ancient Greeks, the ideal life was one filled with eudaimonia. What’s eudaimonia? Translators and philosophers have given different definitions for it, but the best way to describe eudaimonia is the attainment of “ourishing,” through, as Aristotle put it, “doing and living well.” Greek philosophers believed that eudaimonia was achieved through the practice of arete. Translated as “virtue,” arete is better understood as excellence and was sometimes used interchangeably with andreia, or “manliness.” The man of arete maximized his full potential in body, mind, and soul; despite setbacks and challenges, he effectively used his abilities to fulfill his life’s purpose and achieve a real and lasting legacy. Thus for the ancient Greeks, manliness meant being the best man you could be.

The Latin word for manliness or masculine strength was *virtus* (this is where we get the English word “virtue”). The Roman idea of *virtus* centered on valor and courage, and later came to encompass other qualities such as fortitude, industry, and dutifulness. So for the ancient Romans, manliness meant living a life of virtue. So our definition of manliness, like that of the ancients, is simple: striving for virtue, honor, and excellence in all areas of your life, fulfilling your potential as a man, and being the absolute best brother, friend, husband, father and citizen you can be. Living a life of virtuous excellence is harder than learning how to tie a tie or start a fire, but no other pursuit will be as supremely rewarding. One way is to say that manhood is the opposite of womanhood. The other is to say that manhood is the opposite of childhood. The former seems to be quite popular, but it often leads to a superficial kind of manliness. Men who subscribe to this philosophy end up cultivating a manliness concerned with outward characteristics. They worry about whether x, y, or z is manly and whether the things they enjoy and do are effeminate because many women also enjoy them. We advocate the latter philosophy; manhood is the opposite of childhood and concerns one’s inner values. A child is self-centered, fearful, and dependent. A man is bold, courageous, respectful, independent and of service to others. Thus a boy becomes a man when he matures and leaves behind childish things. Both genders are capable of and should strive for virtuous, human excellence. When a woman lives the virtues, that is womanliness; when a man lives the virtues, that is manliness. Women and men strive for the same virtues, but often attain them and express them in different ways. The virtues will be lived and manifested differently in the lives of sisters, mothers, and wives than in brothers, husbands, and fathers. Two different musical instruments, playing the exact same notes, will produce two different sounds. The difference in the sounds is one of those ineffable things that is hard to describe with words, but easy to discern.

Neither instrument is better than the other; in the hands of the diligent and dedicated, each instrument plays music that fills the spirit and adds beauty to the world.

Unlike much of the success and self-improvement literature, which focuses primarily on positive thinking and superficial tips on becoming rich, muscular, and suave, success books from the turn of the twentieth century concentrated on developing a man’s character. Our great grandfathers believed that if a man worked sufficiently hard on forging a noble character, success in all the other areas of his life would naturally follow.

The Noble Eightfold Path

The Noble Eightfold Path is one of the principal teachings of Zen Buddhism. The path is made up of eight factors divided into three larger groups, Wisdom, Moral, Concentration. The divisions are to be developed more or less simultaneously, as far as possible according to the capacity of each individual. They are all linked together and each helps the cultivation of the others.

Wisdom

1. Right View
2. Right Intention

Moral

3. Right Speech
4. Right Action
5. Right Livelihood

Concentration

6. Right Effort
7. Right Mindfulness
8. Right Concentration

There are six paths for reaching the other shore of Enlightenment:

The path of charity, the path of right behavior, the path of endurance, the path of endeavor, the path of concentration of mind, and the path of wisdom. By following these methods or paths one can surely pass over from the shore of delusion to the shore of enlightenment. The practice of charity gets rid of selfishness; the practice of good behavior keeps one thoughtful of the rights and comforts of others; the practice of endurance helps one to control a fearful or angry mind; the practice of endeavor helps one to be diligent and faithful; the practice of concentration helps one to control a wandering and futile mind; the practice of wisdom changes a dark and confused mind into a clear and penetrating insight. Charity and good behavior are like the foundation of a great castle. Endurance and faith are the walls of the castle that protect against outside enemies. Concentration and wisdom are the personal armor that protects one against the assaults of life and death. If one gives a gift only after he has been importuned, or because it is easier to give than not to give, it is charity of course but it is not true charity. True charity gives freely from a sympathetic heart before any request has been made, and true charity is not occasional but is constant. Neither is true charity if after the act there are feelings of regret or self-praise; true charity gives with pleasure, forgetting himself as the giver, the one who has received the gift and the gift itself. True charity springs spontaneously from a merciful heart with no thought of any return or of any inconvenience or even of life itself, desiring only that others with the self may enter into a life of Enlightenment.

Right Observation means to thoroughly understand the Four Noble Truths, to observe things truly and not to be deceived by appearances and desires. **Right Thought** means the resolution not to cherish desires, not to be fearful nor angry, not to harm any living thing. **Right Speech** means the avoidance of lying words, idle words, abusive words, double-tongued. **Right Behavior** means the practice of kindness, the practice of honesty, the practice of purity. **Right Livelihood** means to avoid any life that would bring shame to a man. **Right Effort** means to be guided by right spiritual ideals. **Right Mindfulness** means to maintain a pure and thoughtful mind. **Right Concentration** means to keep the mind pure and tranquil seeking to realize the mind’s pure essence.

There are four points to be considered: First, to consider the body impure, to seek to remove all attachments to it. Second, to consider the senses as a source of suffering, whatever their feelings of pain or pleasure may be. Third, to consider the mind to be in a constant state of flux. Four, to consider everything in the world as being a concordance of cause and conditions and that nothing remains unchanged for ever.

There are four right procedures: First, to prevent evil from starting. Second, to remove all evils as soon as it starts. Third, to induce the doing of good deeds. Fourth, to encourage the growth and continuance of good deeds that have already started. And five faculties or powers: First, faith to believe; second, the will to make the endeavor; third, the faculty of reliable memory; fourth, the ability to concentrate attention; fifth, the ability to maintain clear wisdom in the conservation of results.

Your Mind

Everything originates within the mind. Just as a magician cleverly makes whatever his wishes to appear, so this world of delusion originates within the mind. People look upon it and observe it appearing and disappearing and they believe it to be real and call it life and death. That is, everything is mind-made and has no significance apart from mind. As people come to understand this fact, they are able to remove all delusions and there is an end of all mental disturbance forever. The human mind may be thought of as functioning on three different levels of cognition. On its lowest level it is a discriminating mind; on this level it has the ability to see, hear, taste, smell, touch, to combine these sense concepts, to discriminate them, and to consider their relations. On a higher level it is an intellectual mind where it has the ability to make the inward adjustments that are necessary to harmonize the reactions of the discriminating mind and to relate them to each other and to the whole ego conception. On its highest level it is Universal Mind. As Universal Mind it is pure, tranquil, unconditioned, in its true essential nature, but because of its relation to the lower minds it becomes the storage for their creations and is defiled by them. 2. The human mind discriminates itself from the things that appear to be outside without realizing that it has first created these very things within its own mind. This has been going on since beginningless time and the delusion has become firmly fixed within the mind, and even adheres to the things themselves. Because of this discrimination between the self and the not-self the mind has come to consider itself as an ego-personality and has become attached to it as being something different and more enduring than the things of the world. Thus, the people of the world grow up in ignorance of the fact that discrimination and thinking of ego-personality are nothing but activities of universal mind. As Universal Mind it is pure, tranquil, unconditioned, in its true essential nature, but because of its relation to the lower minds it becomes the storage for their creations and is defiled by them.

2. The human mind discriminates itself from the things that appear to be outside without realizing that it has first created these very things within its own mind. This has been going on since beginningless time and the delusion has become firmly fixed within the mind, and even adheres to the things themselves. Because of this discrimination between the self and the not-self the mind has come to consider itself as an ego-personality and has become attached to it as being something different and more enduring than the things of the world. Thus, the people of the world grow up in ignorance of the fact that discrimination and thinking of ego-personality are nothing but activities of universal mind. Universal Mind, while remaining pure and tranquil and unconditioned in its self-nature, is the source of all mental processes and is, thus, the foundation for the other two minds and retains within itself all their experiences. The Mind, therefore, like a waterfall, never ceases its activity. Just as a peaceful ocean suddenly becomes a tumult of waves because of some passing tempest, so the ocean of Mind becomes stirred by tempests of delusion and winds of karma. And just as the ocean again becomes peaceful when the tempest passes, so the Ocean of Mind resumes its natural calm when the winds of karma and delusion are stilled. 3. The body and its surroundings are all alike manifestations of the one mind, but as observed by human eyes they appear to be different and they are classified as “observer” and as “things observed.” But as nothing in the world exists apart from mind, there can be no essential difference between subject and object. The ego-self and the idea of possession have no true existence. There is only the age-old habits of erroneous thinking that leads people to perceive and to discriminate various aspects of the world where, in reality there are none. All objects, all words, all facts in the world, this body, this treasure, this dwelling, are all appearances that have arisen because of the activities of delusions that are inherent within their own mental processes. If people can change their view-points, can break up these age-old habits of thinking, can rid their minds of the desires and infatuations of egoism, then the wisdom of true enlightenment is possible. If they can bring themselves to understand that everything is only manifestations of their own minds, if they can only keep their minds free from being confused by appearances and deceived by images, then it is possible to gain true enlightenment. The enlightenment preached by Buddha is the true enlightenment. It comes and can only come when the mind is pure of all defilement and clear from all perverting ideas concerning the self and its surroundings. 4. Thus the world of delusion and the world of enlightenment are from the same mind. The effort to keep the mind clear from discriminating ideas so that it can rightly understand the true nature of enlightenment, is the path to enlightenment. For those who are following this path to enlightenment, every circumstance is right and every dwelling place is in Buddha’s Land of Purity. In reality all Buddha-lands are designed to be a blessing to people, because people’s minds and Buddha-lands are all of the same nature. It is like a house built upon a good foundation. Wherever people live, that is Buddha’s Pure Land. But the Land of Buddha must be built upon by pure minds. The pure mind must at the same time be a deep mind, if it is to follow successfully the path to enlightenment. It must be the soul of compassion and charity, it must observe the precepts, it must be tranquil and peaceful, it must be the soul of wisdom, as well as the soul of compassion, the soul that is earnest to use wise and kindly means and methods to bring all people to enlightenment. 5. If people wish to make a Buddha-land of this world, they must first cleanse their own minds. If minds are pure, surroundings will be pure. If surroundings are clean and minds are pure, this world will be a house for Buddha. Then, someone will ask, why is this world so crowded with impurities? A blind man can not see the sun nor moon, but that is no reason why he should deny the existence of the sun and moon. When people have impure minds they are blind to the true nature of things; they can not see the purity that is all about them in this world. In those who have a pure and transparent mind there will be an eye of wisdom with which they will be able to recognize, even in this world, Buddha’s Land of Purity.

Master Key System

Some men seem to attract success, power, wealth, attainment, with very little conscious effort; others conquer with great difficulty; still others fail altogether to reach their ambitions, desires and ideals. Why is this so: Why should some men realize their ambitions easily, others with difficulty, and still others not at all? The cause cannot be physical, else the most perfect men, physically, would be the most successful. The difference, therefore, must be mental - must be in the mind; hence mind must be the creative force, must constitute the sole difference between men. It is mind, therefore, which overcomes environment and every other obstacle in the path of men. When the creative power of thought is fully understood, its effect will be seen to be marvelous. But such results cannot be secured without proper application, diligence, and concentration. The student will find that the laws governing in the mental and spiritual world are as fixed and infallible as in the material world. To secure the desired results, then, it is necessary to know the law and to comply with it. A proper compliance with the law will be found to produce the desired result with invariable exactitude. The student who learns that power comes from within, that he is weak only because he has depended on help from outside, and who unhesitatingly throws himself on his own thought, instantly rights himself, stands erect, assumes a dominant attitude, and works miracles. It is evident, therefore, that he who fails to fully investigate and take advantage of the wonderful progress which is being made in this last and greatest science, will soon be as far behind as the man who would refuse to acknowledge and accept the benefits which have accrued to mankind through an understanding of the laws of electricity. Of course, mind creates negative conditions just as readily as favorable conditions, and when we consciously or unconsciously visualize every kind of lack, limitation and discord, we create these conditions; this is what many are unconsciously doing all the time.

This law as well as every other law is no respecter of persons, but is in constant operation and is relentlessly bringing to each individual exactly what he has created; in other words, “Whatsoever a man soweth that shall he also reap.” Abundance, therefore, depends upon a recognition of the laws of Abundance, and the fact that Mind is not only the creator, but the only creator of all there is. Certainly nothing can be created, before we know that it can be created and then make the proper effort. There is no more Electricity in the world today than there was fifty years ago, but until someone recognized the law by which it could be made of service, we received no benefit; now that the law is understood, practically the whole world is lit by it. so with the law of Abundance; it is only those who recognize the law and place themselves in harmony with it, who share in its benefits. The scientific spirit now dominates every field of effort, relations of cause and effect are no longer ignored. Men now understand that for every result there is an adequate and definite cause, so that when a given result is desired, they seek the condition by which alone this result may be attained.

The Master Key cultivates and develops the understanding which will enable you to control the body and thereby the health. It improves and strengthens the Memory. It develops Insight, the kind of Insight which is so rare, the kind which is the distinguishing characteristic of every successful business man, the kind which enables men to see the possibilities as well as the difficulties in every situation, the kind which enables men to discern opportunity close at hand, for thousands fail to see opportunities almost within their grasp while they are industriously working with situations which under no possibility can be made to realize any substantial return.

The Master Key develops Mental Power which means that others instinctively recognize that you are a person of force, of character - that they want to do what you want them to do; it means that you attract men and things to you; that you are what some people call “lucky”, that “things” come you way’ that you have come into an understanding of the fundamental laws of Nature, and have put yourself in harmony with them; that you are in tune with Infinite; that you understand the law of attraction, the Natural laws of growth, and the Psychological laws on which all advantages in the he social and business world rest. Mental Power is creative power, it gives you the ability to create for yourself; it does not mean the ability to take something away from some one else.

And as the most powerful forces of Nature are the invisible forces, so we find that the most powerful forces of man are his invisible forces, his spiritual force, and the only way in which the spiritual force can manifest is through the process of thinking. Thinking is the only activity which the spirit possesses, and thought is the only product of thinking.

Addition and subtraction are therefore spiritual transactions; reasoning is a spiritual process; ideas are spiritual conceptions; questions are spiritual searchlights and logic, argument and philosophy is spiritual machinery.

Every thought brings into action certain physical tissue, parts of the brain, nerve or muscle. This produces an actual physical change in the construction of the tissue. therefore it is only necessary to have a certain number of thoughts on a given subject in order to bring about a complete change in the physical organization of a man.

Mind is creative, and conditions, environment and all experiences in life are the result of our habitual or predominant mental attitude. The attitude of mind necessarily depends upon what we think. Therefore, the secret of all power, all achievement and all possession depends upon our method of thinking. This is true because we must “be” before we can “do,” and we can “do” only to the extent which we “are,” and what we “are” depends upon what we “think.” The world within is governed by mind. When we discover this world we shall find the solution for every problem, the cause for every effect; and since the world within is subject to our control, all laws of power and possession are also within our control. Every thought therefore is a cause and every condition an effect; for this reason it is absolutely essential that you control your thoughts so as to bring forth only desirable conditions. All power is from within, and is absolutely under your control; it comes through exact knowledge and by the voluntary exercises of exact principles. All growth is from within. This is evident in all nature. Every plant, every animal, every human is a living testimony to this great law, and the error of the ages is in looking for strength or power from without. The world within is the Universal fountain of supply, and the world without is the outlet to the stream. Our ability to receive depends upon our recognition of this Universal Fountain, this Infinite Energy of which each individual is an outlet, and so is one with every other individual.

Now make the application: Select a room where you can be alone and undisturbed; sit erect, comfortably, but do not lounge; let your thoughts roam where they will but be perfectly still for from fifteen minutes to half an hour; continue this for three or four days or for a week until you secure full control of your physical being.

Ease and perfection depend entirely upon the degree in which we cease to depend upon the conscious mind.

R-Drive Personality

The R-Drive Personality system is based on the idea that genetics and environment result in distinct motivation drives that essentially define individual personality.

Breechay’s top drives: Empiricism 100%, Narcism 94%, Stoicism 94%, Activity 94%, Orderliness 88%, Work Ethic 88%, Integrity 88%, Schizoid 88%, Need to Dominate 83%, Honor 83%, Obsessive 83%, Van-ity 83%

Extroversion 50%	Extravagant 38%
Emotional Stability 70%	Family Driven 5%
Orderliness 88%	Paranoia 5%
Accommodation 60%	Schizoid 88%
Inquisitiveness 80%	Anti-social 55%
Narcissism 94%	Borderline 5%
Unconventionality 77%	Histrionic 16%
Empiricism 100%	Avoidant 27%
Vitality 83%	Dependent 5%
Independence 61%	Obsessive 83%
Integrity 88%	Comedian 0%
Intellect 77%	Pet Lover 27%
Stoicism 94%	
Orderliness 88%	
Activity 94%	
Romanticism 5%	
Individualistic 44%	
Adventurousness 38%	
Extraversion 50%	
Mysticism 50%	
Interdependence 72%	
Work Ethic 88%	
Need to Dominate 83%	
Anti-authority 77%	
Wealthy 72%	
Cautiousness 11%	
Sexual 50%	
Peter Pan Complex 27%	
Vanity 83%	
Artistic 22%	
Religious 22%	
Humanitarian 11%	
Fiscal Acumen 72%	
Self image 72%	
Honor 83%	

Global Personality

Breechay is happy, level emotions, not easily discouraged, optimistic, fearless, self confident, non-hos-tile, trusting, rarely sad, content, positive, knows where life is going, socially skilled, not quiet around strangers, acts comfortably with others, takes on responsibilities, likes public speaking, not prone to worrying, not apprehensive about new encounters, flexible, adapts easily to new situations, not afraid to draw attention to self, likes to lead, no bored while working, likes others, hard to annoy, calm in crisis, does not second guess self, not embarrassed easily, high energy level, easy to understand, thinks before acting, strong sense of purpose, likes crowds, interested in science, not prone to jealousy, comfortable in unfamiliar situations, fearless, true to self in all circumstances, driven by reason, physically fit, passion-ate about bettering the world’s condition, finishes most things he starts, not easily confused, willing to explain things twice, hard working, brutally honest, realist, altruistic. Inquisitive, exploring, scientific, contemplative, self-examining, philosophical, high self control, assertive, self revealing, likes to stand out, fearless, dominant, thinks he’s extraordinary . His stability results were very high, he is extremely relaxed, calm, secure, and optimistic. Extraversion results were moderately high, Breechay is at times, overly talkative, outgoing, sociable and interacting at the expense of developing his own individual interests and internally based identity.

He lives for adventure, fortune-hunting, and danger.

Top Strengths

1. Restorative Strength

Breechay is adept at dealing with problems. He is determined to eliminate any problems before they hap-pen. Fascinated with the way things operates he enjoys passing time with people who foresee what will be possible weeks, months, years, or decades from now. He’s honest with himself and about himself. He can admit shortcomings, speak frankly about areas where he needs to do things better and more completely then he has done them in the past. He prefers to point out deficiencies and help individuals wipe them out. He uses this “fix it” approach on himself.He spends his time reflecting on what he should do better, more completely or more perfectly.He’s a very good strategic thinker, often using this strength to devise multiple contingency plans in both professional and personal situations. He likes to plan ahead and be prepared, imagining all the potential scenarios and consequences. He readily takes on projects that others believe “can’t be saved.” He can analyze a situation, identify potential shortcomings, and make the neces-sary adjustments. He enjoys bringing things back to life. It is a wonderful feeling for him to identify the undermining factor(s), eradicate them, and restore something to its true glory. Intuitively, he knows that without his intervention, this thing-this machine, this technique, this person, this company-might have ceased to function. He fix things, resuscitate them, rekindle their vitality. Phrasing it the way he might, he saves them.He measures his worth by how he sees his resourcefulness. Preserving this resourcefulness is the basic motivator in his life.

2. Achiever Strength

Breechay has a constant need for attainment. He has an internal fire burning inside him. It pushes him to do more, to achieve more. New assignments and challenges energize his life. He launches projects with ease and possess a great deal of stamina. He prefers to do things in an orderly or efficient manner. He methodically identifies pertinent facts and establishes a step-by-step workflow and that is the way he prefers to reach his goals. He creates daily rituals or repetitious patterns of behavior to make progress. He can zero in on tasks for hours at a time when he has a goal to reach. By nature, he labors long and hard to produce excellent results. Breechay requires a lot of independence, solitude, or control over assignments. Upon finishing a challenging project, he rarely seeks to be rewarded with a rest or an easy assignment. He appreciates recognition for past achievements, but his motivation lies in striving toward the next goal on the horizon. He has learned to live with a whisper of discontent. It does have its benefits. It brings him the energy he needs to work long hours without burning out. It is the jolt he can always count on to get him started on new tasks, new challenges. It is the power supply that causes him to set the pace and define the levels of productivity for his work group. It is the theme that keeps him moving.

3. Analytical Strength

Breechay questions everything and everyone. He is not impressed by someone’s title or social standing; he will not accept an idea simply because of its author’s status. He does not necessarily want to destroy other people’s ideas but he does insist that their theories be sound. He sees yourself as objective and dispassionate. You like data because they are value free. They have no agenda. Armed with these data, you search for patterns and connections. He wants to understand how certain patterns affect one another. How do they combine? What is their outcome? Does this outcome fit with the theory being offered or the situation being confronted? These are his questions. He peels the layers back until, gradually, the root cause or causes are revealed. He relies on reason to determine how an event, decision or condition led to an outcome. He’s able to process the available data quickly and objectively, and then make a logical choice. He is well aware of the many elements impacting a group of people, project, a process, a deal or a proposal. Independent and decisive, he’s ruthless when it comes to analyzing the usefulness of methods or ideas. He does not care if the idea is popular or supported by an authority figure. He has little patience with rules that make no sense to him. He dislikes artificial limitations; everything should be questionable and open to reevaluation. Breechay excels at being able to analyze anything that life throws at him, uncovering the underlying methodology and then applying it in practice. He’s fairly liberal in a social sense, he believes that many social norms are outdated and unnecessarily restrictive. Breechay’s nearly immune to conflict and criticism, but only when he see such comments as rational. He will be more than happy to listen to alternative views and change his opinion if the opponent proves him wrong. He may even act as a devil’s advocate himself if something seems like an interesting idea. However, any argument he sees as irrational or coming from a person that he has not evaluated yet will likely be discarded straight away. Breechay’s mind is used to filtering out irrelevant information, it applies the same approach to criticism as well. Breechay possesses valuable insights because he’s able to uncover the essential facts needed for excellence in any endeavor. This type of thinking helps him and others become clearer about what excellence is and how it can be attained.

4. Individualization Strength

Breechay’s intrigued by the unique qualities of each person. He has a gift for figuring out how people who are different can work together productively. He puts his opinions, biases, or preferences aside. His satisfaction comes from figuring out why someone behaves, feels, or thinks differently than he does. He instinctively observe each person’s style and motivation, how each thinks, and how each builds relationships. He keenly observe other people’s strengths and draw out the best in each person.

He promises himself to do something better than he did the last time. He examines the consequences of his words and deeds and usually recognizes ways he could perform a similar task or problem the next time with a higher degree of knowledge or skill. He’s determined to gain insight from mistakes so he does not repeat them. His Individualization talents helps him build productive teams. While some search around for the perfect team “structure” or “process,” he knows instinctively that the secret to great teams is casting by individual strengths so that everyone can do a lot of what they do well. He appreciates the unique characteristics of each person and can customize his approach accordingly. Like a casting director, he uses his intelligence about people to position them to do what they do best. This creates a type of team synergy that leads to a more enjoyable experience and increased effectiveness.

5. Competition Strength

Breechay refuses to be content with his performance until he has been declared the most capable, successful, or accomplished person in his chosen group. He measures performance against the performance of others. Outlines details of a practice schedule and attempt to follow them. On most days he may increase his knowledge, skills, or endurance. He has a stick-to-itiveness, dogged perseverance. His training is more rigorous than that of others. Self motivated, driven from within, usually able to become what he wants to become. Breechay bases his sense of self-worth on his resourcefulness. Being able to use his agile mind to figure out what is what and find effective solutions makes him feel that he is at his best.

6. Activator Strength

Breechay can make things happen by turning thoughts into action. He is a catalyst who gets things started. He naturally sees how to turn ideas into action. His energy can be contagious and engaging. He believes that action is the best device for learning. He makes a decisions, takes action, looks at the result, and learns. This type of learning informs his next action and his next. He believes that one must put themselves out there, take the next step because it is the only way to keep thinking fresh and informed. The bottom line is this: He knows he will be judged not by what he says or think, but by what he gets done. This does not frighten him. It pleases him. He’s often impatient.

7. Learner Strength

Breechay has a great desire to learn and want to continuously improve. He’s energized by the steady and deliberate journey from ignorance to competence. Learning builds his confidence. Not only does he love to learn, but he also intuitively know how he learns best. He can learn quickly, and when focused, can keep a group, team, and organization on the cutting edge.

8. Discipline Strength

Breechay thrives in an organized and orderly environment. He likes his days planned so he compulsively finds ways to organize his life. He instinctively imposes structure on his world. He set ups routines, breaks long-term projects into a series of specific, short-term steps, and follows his plan. He likes to create order and structure where needed. He uses his discipline to maintain progress and his productivity in the face of life’s many distractions. Breechay brings a high level of organization, order, and stability to the projects and groups in which he works.

9. Focus Strength

Breechay’s Focus is powerful because it forces him to filter; evaluate each action before taking it to determine whether it will help them reach their goal. He likes to set goals. These goals serve as his compass, helping him determine priorities and make alterations when needed to get back on course. He’s extremely valuable team member because his single-mindedness enhances the speed and quality of his performance and keeps the team on track.

10. Strategic Strength

Breechay has the ability to sort through the clutter and find the best route. This is not a skill that can be taught. It is a distinct way of thinking — a special perspective on the world at large. This outlook allows him to see patterns where others simply see complexity. Mindful of these patterns, he’s able to envision alternative scenarios, always asking, “What if this happened?” This recurring question helps him see, plan, and prepare for future situations. He sees a way when others assume there is no way. Armed with this strategy, He strikes forward. Breechay brings creative anticipation, imagination, and persistence to the groups and projects he works on. He can quickly weigh alternative paths and determine the one that will work best and most efficiently. He finds the best route moving forward.

11. Command Strength

Breechay naturally takes charge. He sees what needs to be done, and he’s willing to speak up. He’s not frightened by confrontation; rather, he understand that confrontation is the first step toward resolution. Whereas others may avoid facing up to life’s unpleasantness, he feels compelled to present the facts or the truth, no matter how unpleasant it may be. He needs things to be clear among people and will challenge others to be realistic and honest. His talent pushes them to take risks. At times, he may intimidate others. And while some may resent this talent, others often willingly hand them the reins. People are drawn toward those who take a stand and are willing to lead. Breechay brings decisiveness and emotional clarity. He has the ability to bring to light what is often avoided or unstated. This gives him the ability to resolve conflicts and misunderstandings.

Summary

Breechay has an unusual combination of both decisiveness and vivid imagination. What this means in practice is that he can both design a brilliant plan and execute it. Imagine a giant chess board where the pieces are constantly moving, trying out new tactics, always directed by an unseen hand. This is what Breechay’s imagination is like. He would assess all possible situations, calculate strategic and tactical moves, and more often than not develop a contingency plan or two as well. When he starts working with a new system, he regards the task as a moral obligation, merging his perfectionism and drive into one formidable force. He will likely immediately and permanently lose respect for anyone who does not have enough talent or simply does not see the point. Breechay is idealist (impossible is nothing) and cynic (everybody lies) at the same time.

- The ability to self-reflect and analyze your own motives, decisions and mistakes is a great strength, and you should utilize it often. This is especially important when it comes to personal development making goals for yourself and managing your ego is an excellent recipe for personal growth.
- Your mind is constantly working and producing insightful analysis. Find the best way of expressing your thoughts. Put value to your thoughts and communicate them.
- Take an academic course that will expand your Analytical talents. Specifically, study people whose logic you admire.
- Volunteer your analytical talents. You can be particularly helpful to those who are struggling to organize large quantities of data or having a hard time bringing structure to their ideas.
- As an achiever, you relish the feeling of being busy, yet you also need to know when you are “done”. Attach timelines and measurement to goals so that effort leads to defined progress and tangible outcomes.
- You do not require much motivation from others. Take advantage of your self motivation by setting challenging goals. Set a more demanding goal every time you finish a project.
- You tend to use a more subtle approach to promoting yourself. Be open to working with people who support your ideas and efforts and who can communicate boldly on behalf of your vision.
- You have a strong desire to succeed long term, but you focus more on day-to-day activities. Devote time to aligning your daily goals with the future success of your endeavor. Seek partnerships with others who can help you understand the costs and benefits of each activity.
- Don’t be afraid to ask people for help finding answers to questions about your situation.
- Make sure that your accumulation and analysis of information always leads to its application and implementation. If you don’t do this naturally, find a partner who pushes you from theory to practice, from thinking to doing. This person will help ensure that your analysis doesn’t turn into paralysis.
- Constant improvement is one of your hallmarks. Seek opportunities to enhance your abilities through a demanding field, activity, or endeavor that requires exceptional skill and/or knowledge.
- Because you are not threatened by unfamiliar information, you might excel in a consulting role (either internal or external), in which you are paid to go into new situations and pick up new competencies or languages very quickly.
- Refine how you learn. For example, you might learn best by teaching; if so, seek out opportunities to present to others. You might learn best through quiet reflection; if so, carve out this quiet time.
- Find ways to track the progress of your learning. If there are distinct levels or stages of learning within the discipline or skill, take a moment to celebrate your progression from one level to the next. If no such levels exist, create them for yourself (e.g., reading five books on the subject, or making three presentations on the subject).
- Designate yourself as an early adopter for new technology, such as a new point-of-sale or back-office system. You will learn quickly and be able to share important advances with your colleagues and peers.

- Be a catalyst for change. Others might be intimidated by new rules, new skills, or new circumstances. Your willingness to soak up this “newness” can calm their fears and spur them to engage. Take this responsibility seriously
 - Study successful people to discover the uniqueness that made them successful
 - Consider that you might be able to write a novel.
 - Use your Restorative talents to think of ways to “problem proof” your work. Identify existing and potential issues, and design systems or processes to prevent errors in the future.
 - Select jobs in which you have the leeway to work as hard as you want, and in which you are encouraged to measure your own productivity. You will feel stretched and alive in these environments.
 - Own the fact that you might work longer hours than most people, and that you might not need as much sleep as many other people do.
 - Partner with someone with a strong Discipline or Focus theme. This person can help you use your energy as efficiently as possible.
 - Your drive for action might cause you to find meetings a bit boring. If that’s the case, appeal to your Achiever talents by learning the objectives of each meeting ahead of time and by taking notes about progress toward those objectives during the meeting. You can help ensure that meetings are productive and efficient.
 - Learn how to use a time management system. It will make you even more efficient and give you more confidence.
 - Create routines that make you follow through systematically. Over time, people will come to appreciate this kind of rigorous predictability.
 - Recognize that many others are not as disciplined as you are. More than likely, their clumsy process will frustrate you, so try to look beyond it, and instead assess them on their results, not on their process.
 - Help others add order to their lives. If you do it in a gentle and respectful way, the right way, they will appreciate it.
 - Seek out roles and responsibilities where structure exists.
 - You might be bored with the same schedule every day; however, your daily wellbeing or efficiency might improve by creating a few routines. Identify the most important priorities in your life and schedule recurring time each day or week to devote to these.
 - Lean on trusted advisers to help you identify needs and build routines. Schedule time to discuss tasks or issues that need attention. Analyze the situation to determine if the issue could be enhanced by creating routines or procedures to make it more efficient or effective.
 - When you set goals, discipline yourself to include timelines and measurements. These will provide regular proof that you are indeed making progress.
 - Hours can disappear when you are intent on a task; you lose track of time. Make sure that all of your objectives are met and all of your priorities are followed by scheduling your efforts and sticking to that schedule.
 - You function best when you can concentrate on a few well-defined initiatives and demands. Give yourself permission to reject projects or tasks that do not align with your overall mission. This will help you concentrate your efforts on your most important priorities — and will help others appreciate your need for focus.will get more done this way.
 - Take the time to write down your aspirations, and refer to them often. You will feel more in control of your life.
 - Make sure that the focus points you set for yourself take into consideration both quantity and quality. The integrity of your objectives will ensure that the application of your Focus talents leads to solid and long-lasting success.
 - Your Command talents might compel you to wrestle for the reins of power. But remember that even when you are not formally in charge, your presence can be an unseen yet powerfully felt force.
 - Step up and break bottlenecks. Others count on your natural decisiveness to get things moving. When you remove roadblocks, you often create new momentum and success that would not have existed without you.
 - Consider taking the lead on a committee. You have definite ideas about what you would like to see happen, and you can naturally influence a group to follow you. You might be comfortable spearheading new initiatives.
 - You will always be ready to confront. Practice the words, the tone, and the techniques that will turn your ability to confront into real persuasiveness.
 - In your relationships, seize opportunities to speak plainly and directly about sensitive subjects. Your unwillingness to hide from the truth can become a source of strength and constancy for your colleagues and friends. Strive to become known as a candid person.
 - In your relationships, seize opportunities to speak plainly and directly about sensitive subjects. Your unwillingness to hide from the truth can become a source of strength and constancy for your colleagues and friends. Strive to become known as a candid person.
 - Your “take charge” attitude steadies and reassures others in times of crisis. When faced with a particularly trying challenge, use your Command talents to assuage others’ fears and convince them you have things under control.
 - You will be at your best when you are prepared for critical conversations. Do your homework in advance by gathering data, factual evidence, and others’ perspectives. This will boost your self-esteem and enable you to make powerful points when presenting your perspective.
 - Partner with other hard workers. Share your goals with them so they can help you to get more done.
 - More work excites you. The prospect of what lies ahead is infinitely more motivating than what has been completed. Launch initiatives and new projects. Your seemingly endless reserve of energy will create enthusiasm and momentum.
 - Make sure that your eagerness to do more at work, you do not skimp on quality. Create measure outcome standards to guarantee that increased productivity is matched by enhanced quality.
 - Figure out what every person on your team does best. Then help them capitalize on their talents, skills, and knowledge. You may need to explain your rationale and your philosophy so people understand that you have their best interest in mind.
 - List the performance scores that help you know where you stand every day.
 - Identify a high achieving person against who you can measure your own achievement. List all the people with whom you currently compete.
 - Turn ordinary tasks into competitive games. You will get more done this way.
-

- You are at your best when your positive attitude shines outward. Meet people and convey your authentic enthusiasm to help you create mutually beneficial relationships.
 - Avoid situations where you have to make a last-minute business decision without considering others’ opinions.
 - Take responsibility for your intensity by always asking for action when you are a part of a group. Your drive to make things happen can be the push that many groups need to move from discussion to action. Make it your role in meetings to ask for action items before the group dismisses.
 - Prepare a simple explanation as to why any decision, even the wrong one, will help you learn, and therefore will make the next decision more informed. Use it when people challenge you and tell you to slow down.
 - Try to work only on committees that are action-oriented. Much committee work might prove very boring for you.
 - Seek work in which you can make your own decisions and act upon them. In particular, look for start-up or turn-around situations.
 - Ensure that you’re judged by measurable outcomes rather than your process. Your process is not always pretty.
 - You can easily energize the plans and ideas of others. Consider partnering with focused, futuristic, strategic, or analytical people who will lend their direction and planning to your activation, thereby creating an opportunity to build consensus and get others behind the plan. By doing this, you complement each other.
 - Identify the most influential decision makers in your organization. Make it a point to have lunch with each of them at least once a quarter to share your ideas. They can support you in your activation and provide critical resources to make your ideas happen.
 - You learn more from real experience than from theoretical discussions. To grow, consciously expose yourself to challenging experiences that will test your talents, skills, and knowledge.
 - Look for areas that are bogged down by discussion or blocked by barriers. End the stalemate by creating a plan to get things moving and spur others into action.
 - You can transform innovative ideas into immediate action. Look for creative and original thinkers, and help them move their ideas from conceptual theory to concrete practice.
 - You possess an ability to create motion and momentum in others. Be strategic and wise in the use of your Activator talents. When is the best time, where is the best place, and who are the best people with whom to leverage your valuable influence?
 - Develop your Analytical skills by sharing ideas with outstanding analysts who specialize in your area.
 - Listen to people with strong Strategic, Belief, or Empathy talents. Their insights and intuitions are difficult to measure, but their assessments are often accurate and valuable nonetheless.
 - Choose work in which you are paid to analyze data, find patterns, or organize ideas. For example, you might excel in marketing, financial, or medical research or in database management, editing, or risk management.
 - Help others understand that your analytical approach will often require data and other information to logically back up new ideas that they might suggest.
 - Remove distractions from your work environment as best you can.
 - Identify your role models. Write down in detail why you want to focus your career toward similar kinds of achievement.
 - Allow others to think, act, and talk less efficiently than you do. Sometimes their “detours” will lead to discoveries and delights.
 - When you are looking to solve a problem or discover the root cause of an issue, start at the end result and work backward (toward the root cause), continually asking: “Why?” You may need to repeat this question several times until the root cause of the problem becomes apparent.
 - Build stretch goals for yourself that can serve as internal standards or benchmarks. Set a more ambitious goal every time you finish a project.
 - You are more interested in the destination than the journey. Consider looking for roles that are oriented toward results rather than processes.
 - Be a complementary partner with people who have exceptional Futuristic talents. Consider playing the role of a “vision catcher” — be the first to endorse another’s vision or be the person who brings greater clarity to someone’s initial vision. You might also be a great “vision caster” — one who can effectively refine and communicate the vision.
 - Take the time to fully reflect or muse about a goal that you want to achieve until the related patterns and issues emerge for you. Remember that this musing time is essential to Strategic thinking.
 - You can see repercussions more clearly than others. Take advantage of this ability by planning your range of responses in detail. There is little point in knowing where events will lead if you are not ready when they do.
 - Talk with others about the alternative directions you see. Detailed conversations like this can help you become even better at anticipating.
 - Trust your intuitive insights as often as possible. Even though you might not be able to explain them rationally, your intuitions are created by a brain that instinctively anticipates and projects. Have confidence in these intuitions.
 - When the time comes, seize the moment and state your strategy with confidence.
 - Learn how to describe what you see “down the road.” Others who do not possess a strong Strategic theme may not anticipate often or well. You will need to be very persuasive if you are to help them avoid future obstacles, or to exploit the opportunities you have seen.
 - Your greatest contribution to a group may be to discover the best path to success. Because you can do this quickly, it may look as if you are “winging it,” but explaining yourself along the way will help others understand what you see.
 - Schedule daily “quiet time” devoted to consideration of your current goals and strategies. This focused time away from the action might be the environment in which you are best able to think through the options to find the right course of action.
 - Because you naturally consider options at such a fast pace, even you might not know how you came up with the strategy — but because of your exceptional talents, it will likely be successful.
 - When making a critical decision, research the topic and discuss the situation with people who have deep knowledge of the subject. Taking the time to investigate and gather information will broaden your options.
-

- Your strategic thinking will be necessary to keep a vivid vision from deteriorating into an ordinary pipe dream. Fully consider all possible paths toward making the vision a reality. Wise forethought can remove obstacles before they appear.
- Make yourself known as a resource for consultation with those who are stumped by a particular problem or hindered by a particular obstacle or barrier. By naturally seeing a way when others are convinced there is no way, you will lead them to success.
- You are likely to anticipate potential issues more easily than others. Though your awareness of possible danger might be viewed as negativity by some, you must share your insights if you are going to avoid these pitfalls. To prevent misperception of your intent, point out not only the future obstacle, but also a way to prevent or overcome it. Trust your insights, and use them to ensure the success of your efforts.
- Help others understand that your strategic thinking is not an attempt to belittle their ideas, but is instead a natural propensity to consider all the facets of a plan objectively. Rather than being a naysayer, you are actually trying to examine ways to ensure that the goal is accomplished, come what may. Your talents will allow you to consider others' perspectives while keeping your end goal in sight.
- Make sure that you are involved in the front end of new initiatives or enterprises. Your innovative yet procedural approach will be critical to the genesis of a new venture because it will keep its creators from developing deadly tunnel vision.

SCOAI

Happy, level emotions, not easily discouraged, optimistic, fearless, self confident, non-hostile, trusting, rarely sad, content, positive, knows where life is going, socially skilled, not quiet around strangers, acts comfortably with others, takes on responsibilities, likes public speaking, not prone to worrying, not apprehensive about new encounters, flexible, adapts easily to new situations, not afraid to draw attention to self, likes to lead, no bored while working, likes others, hard to annoy, calm in crisis, does not second guess self, not embarrassed easily, high energy level, easy to understand, thinks before acting, strong sense of purpose, likes crowds, interested in science, not prone to jealousy, comfortable in unfamiliar situations, fearless, true to self in all circumstances, driven by reason, physically fit, passionate about bettering the world’s condition, finishes most things he starts, not easily confused, willing to explain things twice, thinks he’s extraordinary.

Advanced Global Personality

Stability results were very high, Breechay is extremely relaxed, calm, secure, and optimistic.

Orderliness results were very high, Breechay is overly organized, reliable, neat, and hard working at the expense too often of flexibility, efficiency, spontaneity, and fun.

Extraversion results were moderately high, Breechay is at times, overly talkative, outgoing, sociable and interacting at the expense of developing his own individual interests and internally based identity.

Breechay is clean, likes large parties, outgoing, makes friends easily, optimistic, positive, social, high self control, traditional, assertive, rarely irritated, self revealing, open, finisher, high self concept, controlling, rarely worries, tough, likes to stand out, semi neat freak, fearless, dominant, trusting, organized, resolute, strong, practical, adventurous, hard working, brutally honest, realist, altruistic. Inquisitive, exploring, scientific, contemplative, self-examining, and philosophical

Breechay lives for adventure, fortune-hunting, and danger.

Values & R-Drives

To listen to daily and before challenging circumstances

Narcism:

Breechay has a strong need for power, desires to accumulate lots of wealth and property. Being the best is very important to him, image is important. He greatly values physical attractiveness. He sets high standards for himself and others, likes luxury. Seeks out positions of leadership, competitive. Social status matters. One of his main goals in life is to accumulate as much wealth and property as possible. Breechay has a strong need for power. Money can buy happiness. Being physically attractive is very important to me. Breechay prefers romantic partners that enhance his image. Physical appearance is important to him. He can never have too much money. He doesn’t mind being the center of attention. He is highly ambitious. He needs to be influential. He likes to dress in a way that resembles the subculture that he identifies with. He identifies with powerful / dominating types. He’s highly ambitious. He’s self-centered. He’s obsessed with perfection. If he’s not moving forward, he feels like he’s going to explode. He needs to be influential. He wants to impress his parents. He plans his life logically. He wants everything to be ‘just right. Life is a game to him. He’s in love with himself. He doesn’t care if people think he’s awesome. He’s fascinated with himself. He’s the greatest human being that has ever existed. Physical immortality, never aging/deteriorating physically, appeals to him. If he was to design his own house, he would design it to resemble others houses that he really liked (which he had seen in person or in pictures). The world should be as he wants it to be. He tries to make the world more like he wants it to be. He knows how to get around the rules. The normal rules don’t apply to him. He’s able to control his reality. He likes to educate others. How he feels/thinks about myself does not rely on the opinions of others.

Empericism:

Breechay is analytical, he favors what making sense over what feels right. He’s guided by definitions, logical deduction, reasoning, systematic. He finds being logical rewarding. He avoids acting when rational reasons don’t warrant it. Breechay is exact, diagnostic. He plans his life logically. He always knows why he does things. He’s investigative, favors evidence over gut. He’s calm, professorial. He analyzes whatever doesn’t fit his understanding. He fine tunes concepts to support theories, world view. He’s a categorizer, scholarly, expert. He tries to identify reasons for actions. Breechay is more interested in intellectual pursuits than anything else. He’s a learning machine. He doesn’t mind isolation. He enjoys being viewed as proper. He needs to know how things work. He’s interested in science, he reviews a lot of information to confirm ideas. He’s studious, he can be cold, not easily affected by emotions, concrete. Logical thinking is his oxygen. Breechay strive for internal logical consistency. He modifies models and frameworks to accommodate new data, thereby preserving inner logical consistency. Breechay organizes data and ideas into a logical internal framework or sets of categories. Being logical makes him happy. He logically determine sequences and priorities needed to efficiently complete a task of manage a program. Breechay lives a life based on ongoing analysis, searching for definitive principles and mismatches thereof. He’s often skeptical, critical, and evaluative. When his life doesn’t make logical sense, he’s unhappy. He thrives on problem solving. He often attack complicated material by separating it into components and analyzing it systematically. Breechay likes clear goals and clear ways of measuring success. He objectively measures the external world to achieve measurable goals. He’s quick to spot inconsistencies.He trusts his logic over the logic of others. He frequently looks at past and current concrete situations and data. He quickly perceives similarities, differences, and anomalies. Breechay readily sees cause-effect relationships.

He believes you have to take things apart (figuratively and/or literally) to understand how they work. Breechay questions everything. His decisions involve extensive research. He finds it rewarding to be very aware of his environment at all times. His goal in life is omniscience. Breechay searches for and acknowledge any internal contradictions, then he amends his beliefs accordingly. Breechay enjoys work that allows him to dive in with few interruptions. He tries to identify the reasons for his actions. Only through the awareness of all possibilities is he fully satisfied. He believes people have to be responsible for their own actions. Breechay tries to examine himself objectively. He's highly self aware. He believes doing volunteer work is a waste of time. Winning is very important to him. When it comes to romantic attraction, captivating his mind is more important than captivating his heart. Breechay believes the more efficient your body, the better you feel and the more you will use your talent to produce outstanding results. Breechay likes things he can control. His definition of a good agreement is one that benefits him and the other party equally. Breechay has a lot of theories. He's always prepared. He's exacting in his work. Breechay finds reinforcement within himself, not others. He concentrates easily. He likes order. He believes integrity is more important than loyalty. Breechay is not interested in friendships he can't control. Breechay notices whether the details in front of him match what he's accustomed to. He seeks quiet. He believes in being accountable. He always knows how to act. He compares an experience against a storehouse of familiar experiences to find what's reliable. As long as he still wants something, he keeps trying different things until he succeeds. Breechay wants to follow a path in life which is ambitious, unconventional, logical, beneficial to the world, and makes him happy. He would like to be a politician. Breechay transforms himself by focusing inward on a specific way he foresees he will need to be. He tries to identify the reasons for the actions of others. It's difficult to get him excited. He's very private. Breechay has a lot of will power. He's very particular about who he is. He seeks out the patterns of the universe. Breechay is highly aware of his immediate surroundings and using his five senses (hearing, sight, smell, touch, taste) to immediately react to them. He's determined to have his own way. He spends a lot of time analyzing himself. Breechay is a perfectionist. He frequently gets lost for long periods working on one of his intellectual projects. He's right, others are wrong. He sees himself as calm, emotionally stable. Breechay frequently looks at possibilities and meanings behind things. He can be brutally honest. He operates based on an ideology. He dislikes small talk, but he enjoys talking in depth about topics that matter to him. He finds independence/autonomy rewarding. Breechay believes happiness is about self improvement not ascending the social hierarchy. He believes morality is relative. He applies leverage to a situation to solve a problem impersonally using minimal effort. He's obsessed with perfection. He's good at everything he does. Breechay believes the truth is more important than his image. He believes simplicity is the ultimate sophistication. He frequently attempts to conceive the future, possible contingencies, and significance of things. Breechay believes knowing who you are equals knowing what makes you happy.

Activity:

Breechay loves compliments about his athletic ability. He's attracted to other active types. He likes to push his limits, always wants to improve who he is, believes nothing is impossible. Breechay is dependable, self-disciplined, efficient, ambitious, has a lot of plans for the future. He considers himself great but want to be even better. He's self assured, lives for peak experiences, likes to flirt, daredevil, eats healthy, adaptive, generally happy. Maintaining his physical health is very important to him. He's driven to live the healthiest life possible. He can run very fast. He's energetic. He avoids spending my time just sitting around resting. He has vigorous health. He seeks adventure. He finds adventure seeking rewarding. Optimism is his oxygen. If he meets someone he likes, it's easy for him to ask them to hang out some time, i.e. initiate a friendship. He's courageous. He seeks danger. He finds having little to no responsibilities rewarding. He needs to have an exciting life (stimulating experiences).

Unconventionality:

Breechay is not big on customs/traditions. He has a strong need for individuality, anti-status quo, revolutionary. His ideas sometimes surprise people. He does things others find strange, obscure, non-conformist, peculiar, considered to be eccentric by others, abstract, lives life on his own terms. He's alternative, experimental, artistic, good at making impromptu speeches. He takes frequent stands in the face of strong opposition, creative, likes to do frightening things. He's an improviser, seeks out the patterns of the universe, feels best taking risks, main motivation is to be different, feels attracted to the mysterious, prefers variety to routine, has a vivid imagination, spontaneous, breaks the rules, prone to excess, intense, mystical. Being different is his oxygen. Discards customs, reinvent customs.

He's unconventional. He takes risks. He wants to be different from others. He have a strong need for individuality. He's a free spirit. He discards customs. He loves to examine the unusual. He discards the status quo. He finds non-conformity rewarding. He knows that his ideas sometimes surprise people. He does things that others find strange. He seeks adventure. He seeks danger. He doesn't care what others think. He engages in daily acts of rebellion. He is defined by his internal compass (not an external one). He's more aware of how he want to act than of what actions would be most rewarded by others/society. He knows how to get around the rules. He is inclined to rely more on improvisation. The normal rules don't apply to him. He finds adventure seeking rewarding. He is more preoccupied with what he likes than with being liked. He has a natural talent for influencing people. He thrives on problem solving. He's experimental. Freedom of action and thought is very important to him. He is quick to spot inconsistencies. He has taken frequent stands in the face of strong opposition. He has no respect for the status quo. I am a radical. He wants to follow a path in life which is ambitious, unconventional, logical, beneficial to the world, and makes him happy. He offers various unrelated ideas and see what potential they might suggest. He has a lot of will power. He likes losing myself in things. He often acts on the spur of the moment. He likes to do frightening things. He is insane. He has a vivid imagination. He is prone to excess. He doesn't measure his success by public opinion. Every day is a new adventure. I am very intense. Sometimes rules should be bent. I do things that impress me. He is extremely intuitive. He's random. He keeps following tangents and new ideas without limiting himself to one. If the happiest path in life for him also resulted in everyone thinking he was an idiot, he would still take that path. He trusts his feelings over the feelings of others. He requires novelty and change. He finds reinforcement within himself, not others. He believes happiness is about self improvement not ascending the social hierarchy. He's too lost in my own world to actually care what other people might be thinking/feeling about him. He's so different that he won't be accepted. He finds it easy to manipulate others. Life is a puzzle that he will figure out. How he feels/thinks about himself does not rely on the opinions of others. He's a born leader. He create theories for the sake of theories. He's highly theoretical. He believes nothing is more important than critical thinking. Breechay is adaptable. He tries to make the world more like he wants it to be. He enjoys playing with random interconnections and patterns. He's willing to be misunderstood. He needs to be influential. He tries to experience life entirely in the moment. He sees beauty in things that others might not notice. He can talk others into doing things. He is highly ambitious. He carries the conversation to a higher level. Life is a game to him. He understands people who think differently. He can read minds to some degree. He's impulsive in his actions. He's fascinated with himself. He enjoys the thrill of action and physical experience in the present moment. He finds theoretical physics interesting. He lives to create beautiful things. He believes that everything is related to everything. He's able to manipulate others. He believes he can improve the world by influencing others. He wants to have an impact on people and events. He's the greatest human being that has ever existed. He identifies with powerful / dominating types. He instantly reads visible cues to see just how far he can go. He acts without consulting others.

He frequently assess other peoples emotional states by watching their behavior. He feels a oneness with nature. He’s constantly reflecting about himself. His goal in life is omniscience.

Carreer

INTJs value freedom, control and independence, and being self-employed would give them an excellent opportunity to enjoy these things. Furthermore, self-employment solves one of the major hurdles that INTJs are likely to encounter in the corporate environment – forced interaction with other people. As a self-employed individual, you are free to choose which tasks you want to perform and which ones you want to delegate or outsource – no more following orders, doing tedious administrative work or dealing with people who are unable or unwilling to improve. Self-employment offers many major benefits to INTJs, especially in today’s global and always-connected environment, and people with this personality type are highly likely to be successful in this area.

Think of an interesting way to fulfill an existing need (or create one) and do not be afraid to experiment. INTJs can be excellent entrepreneurs, having both the imagination necessary to develop a good business model, and the willpower to keep going in difficult times.

Military officer, Educational consultant, Computer programmer, Engineering of any type, Inventor, Environmental planner, Urban planner, Medical researcher, Neurologist, Cardiologist

What Would Make a Job Unsuitable for an INTJ?

Here are some characteristics of the type of jobs that may not be suitable for INTJs.

Restrictive Environment

INTJs like to experiment and explore new ideas. If the structure and the rules of the workplace are too rigid, they will more than likely feel stifled and unfulfilled. They are passionate puzzle-solvers and are not happy when restrictions keep them from exercising passion. INTJs may not even be able to function at their highest capacity in such an environment. Too many standards and too much oversight will make INTJs’ focus too narrow for the way they process information and gain insights. People with this personality type need room to “play” mentally. To function at their fullest, INTJs need independence, not supervision. They may also reject feeling locked into a career path that seems to be “pre-set”. They are typically happy just doing the work they are passionate about and office politics are annoying to them.

Work that is too dependent on “face time”

INTJs tend to do much better as lone workers. First, they often feel others get in their way. They sometimes see others as an obstacle and a distraction. Second, they can be sarcastic and condescending to those they consider less than their equals. This can create an unpleasant work environment and damage morale. And like any Introverted type, working with others for too long will exhaust INTJs.

INTJs prefer working alone, mostly because they believe that others are only going to slow them down. They enjoy brainstorming in the workplace, as long as the discussion does not descend into arguments over details. INTJs cannot stand inefficiency or colleagues who refuse to use more efficient methods. They loathe manual work, especially where it can be automated . They see little point in networking, socializing or small talk at work . INTJs are intensely private and likely to deflect personal questions. They dislike phone calls and prefer e-mail instead.

Breechay is drawn to the following careers:

Entrepreneurship, Military Intelligence, Diplomat, Film Director, Programmer, Surgeon, Neurologist, Biotechnology, Health Educator, Public Health Professional, Neurologist, Biologist, Psychologist.

Being a Diplomat

Possess an abiding interest in and passion for the art and craft of diplomacy and international relations. If this subject matter does not feed you, if you do not have a compelling instinct to learn about the world, pursue a different profession. Demonstrate an analytical temperament. Our current culture encourages ideological predisposition and rigidity. We are invited to have an opinion without first having a full command of the facts. Resist the temptation to prescribe before you analyze. Dean Acheson understood how hard this is, “I was a frustrated schoolteacher, persisting against overwhelming evidence to the contrary in the belief that the human mind could be moved by facts and reason.”Write well and quickly. Nurture your ability to rapidly produce quality prose. Read and learn from great writers. Try George Orwell, E. B. White and John McPhee. Be verbally fluent and concise. George Shultz observes that listening is an underrated way of acquiring knowledge. Pay attention, speak only when necessary and keep your comments brief. These are not qualities highly prized in academia. Ensure meticulous attention to detail. Whether your work is going to the President or Prime Minister, to your immediate superiors or to your peers, each deserves a flawless product. Don’t accept less of yourself. Jeff Bezos stresses, “If you don’t understand the details of your business you are going to fail.” Be a tough and effective negotiator. Getting to yes is not the objective of a diplomat. Begin instead with what best serves your country’s national interests and then seek to achieve a negotiating outcome as close to those requirements as possible. Adopt clear red lines and do not compromise beyond them. And as James Baker advises, “Never let the other fellow set the agenda.” Build long-term physical and mental stamina. With the exercise of power and responsibility comes continuous 12-16 hour days, filled with pressure and stress. Be fit. Accept dangerous assignments. Diplomats frequently serve in menacing locales, sometimes die in the line of duty. From Libya to Iraq to Afghanistan and beyond, this is not a line of work only conducted in rarefied surroundings. Reflect on your degree of anticipated personal courage before entering this profession. Study history. Former Harvard faculty giants Ernest May and Richard Neustadt eloquently counsel thinking in the context of time. They insist that knowledge of history does not provide exact policy prescriptions in present circumstances, but it does illuminate choices and raise central questions of policy formulation and implementation. A good start is Henry Kissinger’s A World Restored. Prudently speak your opinion to power. Be ready to disagree with evolving policy when it really matters. But choose your dissenting moments wisely. Don’t badger your principal. And if such policy differences become paramount, don’t whine. Resign. Be loyal and truthful to your boss. Never question outside of government a decision made further up your bureaucratic chain of command, no matter how much you disagree with it. Once such a decision is made, your professional duty is to try your best to implement it. There is nothing courageous in disavowing your Administration’s decision in whispered tones in social settings. And never misrepresent or lie to your official superiors, no matter how expedient it might appear at the moment. If you do so, you should be fired. Cultivate policy resilience. If the Duke of Wellington never lost a battle, most generals do – and so will you. Expect periodic policy defeats and energetically move on to the next challenge. Acquire relevant work experience. Invest time, energy and effort in your own professional development. Don’t thirst for too much power and responsibility too soon. In diplomacy – as in most endeavors – experience is a crucial component of success. As Renaissance painters demanded, apprenticeship is a necessary step in professional enhancement. Would you hire a plumber who was academically well versed in water distribution, but had never installed a pipe? Know your political ideology. No matter how flattering a foreign policy job proposal may be, ask yourself whether your ideology is compatible with that of the offering institution. Not to do so is to invite endless professional pain and torment.

Take advantage of luck when you encounter it. When Napoleon was asked what kind of generals he looked for, he responded “lucky ones.” Be ready when events in the world provide policy opportunities you can exploit. Getting on a personal professional wave you can ride – and that you want to ride – is also importantly a matter of good fortune.

For a long time it was held that a diplomat is born as such and that it is impossible to produce a diplomat by training. This view was based on a lack of distinction between personal characteristics and qualities of the diplomat on one hand, and the knowledge and skills he needs to do his job on the other. Whereas the first are indeed part of the physical and mental makeup a person is born with, the second can be and must be taught. The days when any well-born and well-bred dilettante of great personal charm could handle diplomatic business as a result of these in-born and in-bred qualities are long past, if they ever truly existed. However there are some characteristics and qualities a diplomat should possess if he is to perform at all well in his profession, however vast his acquired knowledge and skills may be. Thus, before going into the issue of training, we should spend a few moments to consider what these qualities and characteristics are or should be. Diplomacy is not for the sickly, the weak, the neurotic and the introverts. A robust constitution and good health are needed to stand the physical and mental strain put on diplomats in many situations. Being able to sleep well in almost any circumstances is of great help. A well-balanced personality, good self-control, a natural inquisitiveness, an interest in understanding others and their manner of thinking are also essential. This should be complemented by a friendly and outgoing nature, natural courtesy and good manners, a capacity to create empathy and develop friendships. A gift for languages is a great asset, because being able to communicate with opposite numbers in their own language is becoming increasingly important, especially in some less traditional forms of diplomacy.

WHAT MUST A DIPLOMAT KNOW?

For a long time diplomats studied history, languages and law, and this was seen as sufficient. Even today, lawyers are over-represented in foreign ministries. A quick look at the subject-matters of present-day international relations should suffice to impress on anyone the importance of multi-disciplinary academic knowledge. To that extent the generalist-specialist controversy does not exist at all. All diplomats must have basic familiarity with history, law, economics and political science. And it is therefore not surprising that curricula of all respected training institutions includes these subjects. But diplomats must also be able to acquire specialist knowledge in nearly any subject when needed. This may be in order to assume a certain position within the diplomatic establishment or in order to handle a temporary task like a specific mission or negotiation. It is therefore important when providing them with their initial training, or when completing such training undergone prior to the admission to the career, to promote the capacity for assimilating unfamiliar subjects at short notice. A diplomat who has this ability can look forward to a variegated career, whereas one who finds it difficult to assimilate new knowledge is likely to spend his life dealing with matters well within his range of competence, thus becoming some sort of specialist not to be considered for assignments handling other matters.

Being and Intelligence Officer

It is not surprising then that consumers of our services are in a hurry and that they are very busy people; the president’s day is actually planned in five minute increments. These people have many, many sources of information, and many of the people we serve believe they are better plugged into the world than we are. After all, I, the policymaker, am smart and have excellent sources of information (including all the ones you have), and I am very busy, so why should I spend some of my most precious commodity on you?” The reality for intelligence officers is that we must woo them, sell them on the need for our services, and demonstrate the value of our material daily through its timeliness and its sophistication. My personal experience is that our consumers will take frequent bad news and unhappy assessments as long as they are well-reasoned, supported by data and argument, and presented without rancor, value judgments, or arrogance. Briefings and background notes are important parts of doing the mission, but they leave no permanent record. One can fight over what was said in a briefing, but the written word is in black and white. It is the intelligence assessment that end up in the archives, and it is the paper product that gets held up at a congressional hearing or eviscerated on an editorial page.

And when I say forever, I mean forever. And everyone years and years from now will know what it said, because it is viewed—rightly or wrongly—as fatally flawed and responsible for a war. It will never go away. Every time we publish, we go “on the record” and the record is there forever, for the second guessers, the hindsight experts, and anyone with an agenda. Thus, our judgments need to be as precise as we can make them, supported by evidence and argument, and accurately reflect our level of confidence every time. And the consumers of intelligence say out loud “Why should I trust you on this issue when you were wrong on that one?” Weak performance in one DI area immediately calls into question all your work. Successes will be secret and its failures will be trumpeted. To which I add my own corollary: in the intelligence business success is transitory, and failure is permanent. Our customers read our products for many reasons: to learn, to make better decisions, to look for ammunition in a policy fight, or to discredit what the IC says. One defines the mission—rests on one thing and one thing only: our reputations for analytic rigor, objectivity, and total integrity. Lose that and we lose everything. These five truths demand tradecraft excellence, they demand exacting standards, and they demand the pursuit of perfection. They demand that we learn from our past, and they demand that we ask the best of ourselves every time. To do the mission; to serve the policymaker; to protect the nation—requires nothing less. It is about being timely, relevant, expert, and corporate in our approaches to providing service, intelligence analysis. Success is measured not by the number of units produced, but by how well the product addresses and answers the specific concerns of an identified and targeted audience. In a product mentality, the focus is on the producer, who thinks of a product as his or hers. It is also about packaging that product and disseminating it widely. Success is measured in numbers—how many units were produced or how many received each unit. Product and service are not mutually exclusive. Ideally every product we produce should be infused with a service mentality—although we often act like we are in the product business. What difference does it make? When the product is more important than the service it provides, we relax our standards to get the product—another unit of production—off the assembly line and out the door. Close enough becomes good enough, and the brand name suffers. It is possible to have many different intelligence questions for the same event. Current intelligence pieces generally work best when they are organized around one central question, although they may touch on others. Which question to focus on is determined by who is selected as the primary audience and what that audience is most interested in or most needs to understand.

Forty years of experience have taught me that failing to identify a specific audience and an intelligence question up front is often at the root of the weakest analytic efforts. In the Art of Review Seminar we talk about “The Road to Ruin,” the first step on which is not clearly defining the issue to be addressed. This in turn easily leads to other, too common, failings in analytical writing:

A failure to present a clear basis for judgments.

A weak piece typically speculates on what happens next but seldom provides the reason an analyst believes the speculation is correct. The most underused word in CIA DI analysis is “because.” Every “may” and “likely to” and “could” requires a “because” statement or its equivalent—the reason we believe what we believe. Absent the “because,” or its equivalent, that article is just another opinion in a town full of opinions.

The use of imprecise language.

It is not so much that language in a work of analysis is opaque but that the point it is trying to make does not come through. It is stating that “X benefits from Y” without providing a standard by which to measure the benefit or spelling out precisely how and why X benefits. Words like “limits,” “benefits,” “suggests,” and all adverbs need a “because” or “why” or “how” to convey precise meaning. Internal inconsistencies, not surprisingly, are often rooted in imprecise language.

I always thought of my job as “bounding uncertainty” and by doing so helping make my guy smarter than their guy, whether it was across a conference table or across a battlefield and enabling our policymakers to make the best decisions possible given the time and information available. Sometimes that involved connecting dots or predicting courses of action or providing warning, but it always meant understanding the forces at work in any situation—the key variables and drivers and our adversary’s perspective. It is the difference between strategic understanding and tactical command of an issue.

Third, good analysis makes the complex comprehensible, which is not the same as simple.

The key to making the complex comprehensible is having in mind a specific audience and a very precise intelligence question for the analysis to tackle. Data dumps and murky analysis almost always are rooted in trying to write about a development without first asking, “Who is my audience and what specific question does it need answered?” It is that difference between “we need a piece on the rioting in Athens” and “we need a piece on the government’s options for addressing the underlying cause of the rioting.”

We do very well as a rule in responding to questions from policymakers. We come up short when we have to supply the audience and the question ourselves and we start to write before we have done all the thinking. If we think in terms of answering well defined questions, we can make complex situations comprehensible, and we also stand a better chance of making clear what we know and do not know accurately, conveying our level of confidence, and presenting a convincing basis for our judgments.

Fourth, there is no substitute for knowing what one is talking about, which is not the same as knowing the facts.

Former CIA Director Michael Hayden once famously said, “If it is a fact, it ain’t intelligence.” The business of intelligence analysts is more about putting facts in perspective than it is having command of the facts. We are paid not for what we know, but for our ability to think about what we know—or think we know. It is about knowing what is important. It gets back to those assumptions, drivers and variables I dwell on.

Sources—clandestine, open source, technical, diplomatic, etc.—are not the same as knowledge. Sources are not the equivalent of, or a substitute for, expertise, the type of knowledge I talked about in the second thing I learned. All sources are best thought of as opinions, some more authoritative than others, but all should be subject to careful reflection and comparison to what we know and believe. The dangers in sources are three-fold:

We tend to give greater credence to those that support what we already believe.

Sources are not a scientific sample but a small slice of a much larger and more complex information picture.

They never answer the critical question of what are we not seeing but should see if our analysis were correct.

During one of the most challenging times in my analytical career, I worked for the finest analyst I ever knew. In the middle of the Tiananmen Crisis in 1989—when everyone’s hair was on fire—I found him late one afternoon going through a stack of musty old reports. I asked him what he was doing. He said, “I am looking for things that did not make sense then, but do now.” He found some, and it profoundly affected our line of analysis.

Fifth, intelligence analysis starts when we stop reporting on events and start explaining them.

Our production cycle puts a premium on being agile, quick, and smart. It is often 24 hours or less. The DI is one place where a consumer can ask a question and get an answer—a thoughtful and considered one—overnight.

There is a Chinese proverb: “If your vision extends one year, grow wheat; if it extends 10 years, plant trees; if it extends 10,000 years, grow and develop men.” Managers, your job is to grow men and women who can do the mission. The standard of success, I believe, is uncompromisingly simple: “Did I leave the unit I led stronger than I found it?”

We cannot afford to accept anything less than the pursuit of perfection. We cannot accept anything less than holding ourselves to the highest standards. We cannot accept anything less than our best effort every time, every day. The potential consequences are too great.

And I know it is damn hard. Intelligence analysis is less fun than a policy rotation or an overseas assignment. It is less honored and romanticized than other aspects of the Great Game. It is frustrating. It is exhausting. And even the best efforts will be picked at. The analyst’s work will be criticized by the knowledgeable and the ignorant alike. It will even be demonized at times—independent of its quality—and it will always be hostage to the politics of the moment.

But—and I say this with my four decades of perspective—what intelligence analysts do has impact. It matters. I have seen the quiet victories of intelligence and the mistakes averted, and I have seen critics become advocates because of what analysts do every day. We all chose careers in intelligence for the same reason: to make a difference, to do the mission. The colleague who teaches the Kent School’s Art of Review Seminar with me tells a story about Abraham Lincoln, who in one of the darkest hours of the Civil War attended a Sunday service in that little church that still stands across from the White House. On his way back, he was asked by a fellow parishioner what he thought of the young reverend. Lincoln replied that he had a strong voice and clear message, but that he failed to do one thing; he failed to ask us to do something great.

I am asking every analyst who reads this to do something great. Do what brought you here. Do the mission every day to the best of your ability. And, may God bless you for doing it.

Book Notes

The Three Pillars of Zen

- Zazen must not be confused with meditation. Meditation involves putting something into the mind, either an image or a sacred word that is visualized or a concept that is thought about or reflected on, or both. In some types of meditation the meditator envisions or contemplates or analyzes certain elementary shapes, holding them in the mind to the exclusion of everything else. The uniqueness of zazen lies in that the mind is freed from bondage to all thought-forms, visions, objects, and imaginings, how ever sacred or elevating, and brought to a state of absolute emptiness, from which alone it may one day perceive its own true nature, or the nature of the universe.
- A word about food. It is better to eat no more than eighty percent of your capacity. A Japanese proverb has it that eight parts of a full stomach sustain the man; the other two sustain the doctor. The Zazen, compiled about 650 years ago, says you should eat two-thirds of your capacity. It further says that you should choose nourishing vegetables- of course meat eating is not in the tradition of Buddhism and it was taboo when the Yojinki was written- such as mountain potatoes, sesame, sour plums, black beans, mushrooms, and the root of the lotus; and it is also recommends various kinds of seaweed, which are highly nutritious and leave an alkaline residue in the body.
- Breechay: We all possess greatness. When we get a glimpse of it we get excited, truth is it’s nothing peculiar. It as trivial as our ability to breath air.
Breechay: Greatness is from within, you don’t become great. You just become more aware. It had never left you.
Breechay: The length of training is irrelevant compared to how much is absorbed.
- With further training, though, you are able to live life of equality and to see that even people whom you recognize as having negative characteristics are not less than yourself.
- A lawbreaker is not inherently evil, nor is a law abiding person a pillar of virtue. Nonetheless, for a society to function harmoniously, people who against accepted law- who kill or steal, for example must be segregated for the protection of others

- You can help people only when you are able to recognize and accept the differences among them, seeing each individual in the light of his or her own unique qualities.
- When you are involved in zazen to the point of self transcendence, that is enlightenment manifesting itself.
- Faith that is firmly and deeply rooted, immovable, like an immense tree or a huge boulder. It is faith, moreover, untainted by belief in the supernatural or the superstitious.
- You must cut off all discriminating thoughts. This means that it is useless to approach Zen from the standpoint of supposition or logic. You can never come to enlightenment through inference, cognition, or conceptualization. Cease clinging to all thought-forms! I stress this, because its is the central point of Zen practice. And particularly do not make the mistake of thinking enlightenment must be this or that.
- When you have cast away illusory thoughts and discriminations, and inside and outside are as one, you will be like a mute who had a dream but is unable to talk about it.
- The proof of the student’s awakening lies in the ability to respond instantly in a “live” way to questions that demand a concrete demonstration of the spirit of his or her koan... What convinces the teacher are not merely the student’s words or gestures or silence (which can be equally effective), but the conviction and certainty informing them, that is, the comprehending look in the eye, the decisiveness of the tone of voice, and the spontaneity, freedom, and thoroughness of the gestures and movements themselves.
- Intrinsically there is no ego- it is something we ourselves create. Still, it is this self-created ego that leads us to zazen, so it is not to be despised. Zazen, as you have probably realized, brings about an attrition of the ego. You can also get rid of ego by abiding by the rules of seshin instead of following your own inclinations. If, for example you don’t want to rise when the bell rings for everyone to get up and walk around, you are catering to your ego and so enhancing it. The same is true of eating. You surrender to your ego each time you decide to forgo eating communally and go off to eat by yourself. Now, since ego is rooted in the subconsciousness, the only way to uproot it is by a thoroughgoing enlightenment.
- One obsessed by the idea of helping others feels constrained to aid those who might be better off without such aid. Take a person with little money who lives simply. To give such a person material things unessential to this simple way of life would destroy that life. This would not be kindness at all. A buddha is compassionate, but he isn’t obsessed by the desire to save others.
- Roshi: If you want to do zazen in an easy, relaxed manner, that is alright too. We can make this comparison. Three people want to reach the top of a mountain where there is an exceptionally grand view. The first doesn’t want to exert himself, he wants to stroll; so of course it will take him a long time to reach the top. The second, in more of a hurry, walks with long strides, swinging his arms as he moves up. The third, in what seems like a leap and a jump, gets to the top quickly and exclaims: “Oh, what a magnificent sight!”
Student: Which was it the best?

Roshi: It all depends on your state of mind. If you have plenty of time, the first way is satisfactory. But if you are eager to reach the top quickly, naturally one of the other ways is better. Needless to say, to move rapidly requires more energy. Furthermore, when you exert yourself with passionate intensity you can expect untoward occurrences, frightening as well as pleasant- in other words, what you have been experiencing.

- The back must be straight and the mind taut-ever watchful. A sagging body creates a sagging mind and vice verse. The mind must be thoroughly alert, yet not tense.

- Sit comfortably at all times, with your mind profoundly absorbed yet flexible, and without strain in the region of the stomach.

- Be at one with every aspect of your life.

- No other thoughts will enter your mind if the questioning is sufficiently intense.

- Don't concern yourself with what happens around you, only concentrate on your own problems.

Shadow Warrior

- Minor expenditure of energy at the right place and or time in a process could be equivalent to or greater than a much larger effort at a later or less carefully selected point.

- Camouflage, concealment, and deception, lie detection and deductive reasoning; statistical analysis and scientific experimentation; and techniques of disinformation, persuasion, and manipulation

- Refine your abilities, to strive to do more and more with less and less, until you are able to do virtually anything with almost nothing.

- Does invisibility require actual transparency, or is one simply able to pass unnoticed? If future events can be forecast and people's inner thoughts divined through observation, investigation, and analysis, is it any less powerful a gift? Is invincibility really a matter of winning every battle, or is it simply having the wisdom to fight only battles that can be won?

- Life is both a lecture hall and a grand laboratory. The real secret is an awakening, a conscious decision to open wide the senses to the world around us, the birth of a new awareness. For only by opening our eyes to detail and our ears to nuance can we transcend the ordinary and the everyday and travel into the shadow realm of insight and illusion. Unlike those who move through life passively, aware only of such information as is presented to them in a direct and obvious fashion, practitioners of the butterfly art will learn to take an active and intelligent role in gathering and analyzing data, as well as in deciding how to use it to best effect.

- Whatever our reasons for taking up this discipline, we are not alone in the endeavor. Our colleagues, while relatively few in number, live and work among us. And while virtually everyone, whether he knows it or not, has cause to call on certain of the abilities discussed herein on occasion, it may be helpful to identify five archetypes, professionals for whom such skills are more than mere conveniences or curiosities; they are tools of the trade.

- Come and go without being detected. Observe events without being seen. Communicate information seeming to do so. Gathering clues and assembling pieces of a puzzle. Examine a scene to identify a potential suspect or to examine a person to ascertain his level of knowledge, complicity, or motivation. Keep close track of activity of a variety of fronts in an effort to stay one step ahead of emerging situations. Predict and explain the behavior of specific groups of people. Ability and willingness to plan, prepare, and deploy assets to maximum effect is of paramount importance.

- The power to appear only to the extent or in the manner of one's choosing is perhaps the most essential aspect of the art of the butterfly. The behavior of others is governed almost entirely by what they perceive rather than truly is. Control perception.

- Initial perceptions of people are governed largely by outward appearances. Learning to control appearance, therefore, is an important step in managing perception.

- There's a look away reflex, it's an instinctive behavior observed in people who encounter those with deformities or unsightly conditions. (Keep your eyes deep into someone's eyes ignore everything else, avoid wandering eyes.)

- The devil, as they say, is in the details.

- Crosscheck everything: compare answers with one another and look for internal consistencies. (Life insights)
- The answer, as simple as it sounds, and as hard as it is to achieve, lies in behaving as naturally as possible under any circumstances.
- Psychologist believe that during an early stage of infancy, babies do not even understand that people and things continue to exist when they are removed from immediate view. Even into adulthood, “out of sight”, as they, “is out of mind”.
- It is equally important to take note of others employing techniques similar to yours.
- Diversion on the happening of a triggering event or after a period of time. An empty bottle balanced upside down on a door handle will crash to the ground at the slightest attempt to turn the knob from the other side. Similarly, a cigarette tucked into a book of matches by the filter end will burn down in a matter of a minutes, eventually igniting this improvised flare and anything else nearby.
- Somebody Else’s Problem (SEP). An SEP... is something that we can’t see, or don’t see, or our brain doesn’t let us see, because we think that it’s somebody else’s problem. The brain just edits it out, it’s like a blind spot.
- Janitors, repairmen, and inspectors of all sorts move around us, equipped with mops, tool belts, and theodolites, attending to matters that most people view as not their problem. These workers are seldom noticed unless it is our area, utility, or property that requires their attention. Even then, some among us rarely take the time to pay any attention to the type of people they typically think of as “support staff”.
- The art of Feng shui lays down principles for the auspicious location of every object relative to every other.
- Route, rythm, rate
- With respect to rate, the rule is “more haste, less speed”
- Police officers manning drunk driving checkpoints, for example, have been known to clean off the headlights of every car in the parking lot of the local bar as to be able to identify them on the road at some later point by the differential in brightness.
- Concealment, illusion, and misdirection
- With your spirit open and unconstricted, look at things from a high point of view.
- Study the ways of different arts one by one
- Observe how some people move with purpose while others waddle along seeming to have no goal in life.

- In our everyday lives, how often do encounter someone whose arrival lights up the room, whose personality is larger than life, or who has a commanding presence
- Posture, bearing, demeanor, eye contact, and even attitude.
- How we carry ourselves speaks volumes about our distant our recent past. And as with virtually every aspect of this particular, context is critical
- Avoid being conspicuously evasive
- Practice the art of stillness. Avoid telegraphing information through your manners breathing. The process must be controlled
- True stillness is pure total stillness, transmitting nothing and receiving nothing
- Careful research, observation, and deduction combined with a basic understanding of human psychology will allow the watchful observer to discover a significant amount of information about his target’s thought process
- Nothing should be deemed irrelevant
- Rely on initiative, ingenuity, and hard work
- Do not just look at a patient, but feel him, probe him, listen to him, smell him. Deduce facts, both medical and personal, from seemingly unremarkable details.
- People are driven to fulfill certain wants and desires and that they employ readily observable and definable coping mechanisms to deal with stress in their daily lives. Defining and examining the nature of these motivations and behaviors can be of tremendous assistance in the ongoing effort to look into the mind of given subject
- People have needs and they are engaged in a constant struggle to satisfy them
- Interrogation specialists trained in the fundamentals of psychology agree that the self actualized individual presents a far greater challenge. Such a person has the ability and the wherewithal to assess and accept or alter his situation and the internal sources to withstand or deflect a tremendous amount of external pressure.
- The way in which an individual organizes his life and word choice is a valuable gauge.
- The person with whom the target is likely to be most honest with is himself. The target internal dialogue, in whatever form the detective may have access to it, is perhaps the most reliable material of all intercept. Such reflexive communication may take the form of journal or calendar entries, notes or reminders, or verbal statements made on rare occasion to oneself while either sleeping or waking.
- The process of obtaining information must be analyzed at two levels: sufficiency and accuracy.

- A degree of deception with respect to the reasons behind the questions may be required, but answers can often be procured by simply approaching the subject in a non-threatening fashion.

- Sufficient physical discomfort, whether applied externally or internal(as with the practice of water-boarding_ will usually cause a subject to break. This is especially true when combined with psychological or pharmacological disinhibitors

- The practitioner of the butterfly art must appreciate the distinction between “reading” a subject’s minds as a parlor trick and trying to look into his psyche for purpose that are more meaningful. To begin with, the former is a demonstration of the readers powers of observation and deduction, and, as such, the ultimate objective is clear; the latter depends in large part on concealing the real purpose of the interaction from the subject.

- It may be helpful to reveal at least a portion of the intelligence that has been gathered thus far to the subject. Letting the figurative cat out of the bag may serve to create the impression that the interviewer possesses superior knowledge. Also, this tactic may be used to probe and test the accuracy of the conclusions that have already been drawn.

- A shared seat on a train or adjacent tables in a cafe will often suffice.

- Questions should be both oblique and nonthreatening if they are to yield the desired results. There is timing to good conversation, a give and take back and forth. Once this level of comfortable communication has been achieved, all manner of confidences may be shared.

- Sometimes the best question is silence. Interrogators the world over have learned that most humans experience an almost uncomfortable urge to fill the pregnant pause.
- Does the word choice and diction suggest good education? Are the terms of art or pieces of jargon sprinkled into the subject’s everyday speech that provide clues to the nature of his employment? Are there recurring patterns of speech or expressions? Does the tone suggest confidence or timidity? Is the pitch too high or too low for the body type? And in rare instances, does the manner of talking suggest regression or a failure to progress beyond a certain development point in life.

- As strange as it may sound, many people, including criminal suspects, demonstrate an irrepressible desire to reveal things that others might ordinarily expect them to want to keep secret.

- An unnecessarily long pause between a question and answer suggests that the subject needs time to formulate his response and he is therefore unwilling or unable to proceed unscripted

- People use body language and physical gestures to amplify their words on a regular basis.

- Steepling the fingers is thought to carry with it a sense of superiority

- There are no coincidences, Each thing is part of every other. When something happens, it happens for a reason. Just because you may not see the reason does not make it otherwise. Know this truth and you will see far. Know the reason and you will see all. This is the second teaching in the art of the butterfly.

The Effective Executive

What made these executive effective is that they followed the same eight practices:

They asked, “what needs to be done?”

They asked, “What is the right for the enterprise?”

They developed action plans.

They took responsibility for decisions.

They too responsibility for communicating.

They were focused on opportunities rather than problems.

They ran productive meetings.

They thought and said “we” rather than “I”.

Executives are doers, they execute. Knowledge is useless to executives until it has been translated into deeds.

Every success creates new opportunities. So does every failure. The same is true for changes in the business environment, in the market, and especially in people within the enterprise.

The action plan needs to create a system for checking the results against the expectations.

Napoleon allegedly said that no successful battle ever followed its plan. Yet Napoleon also planned every-one of his battles, far more meticulously than any earlier general had done. Without an action plan, the executive becomes a prisoner of events. And without checkins to reexamine the plan as events unfold, the executive has no way of knowing which events really matter and which are only noise.

Executives owe it to the organization and to their fellow workers not to tolerate nonperforming individuals in important jobs. It may be the employees’ fault that they are underperforming, but even so, they have to be removed.

Very often it shows them that their decisions didn’t produce results because they didn’t put the right people on the job. Allocating the best people to the right position is a crucial, tough job that many executives slight, in part because the best people are already too busy.

Organizations are held together by information rather than by ownership or command. It is the responsibility for each executive to identify the information he needs, ask for it, and keep pushing until he gets it.

Focus on opportunities: Effective executives treat change as an opportunity rather than a threat. Ask “How can we exploit this change as an opportunity for our enterprise.

One way to staff for opportunities is to ask each member of the management group to prepare two lists every six months- a list of opportunities for the entire enterprise and a list of the best-performing people throughout the enterprise.

[Meetings] For meetings to be effective, one member has to prepare a draft before hand. At the meeting’s end, a pre-appointed member has to take responsibility for disseminating the final text... Nothing but the report should be discussed... Discussions should be limited to questions for clarification... All participants may ask questions. The report should be distributed to all participants well before the meeting. Presentation time should not exceed 15 minutes.

Listen first, speak last. Effectiveness is a discipline. And, like every discipline, effectiveness can be learned and must be earned.

There seems to be little correlation between a man's effectiveness and his intelligence, his imagination or his knowledge.

Insights become effectiveness only through hard systematic work.

The knowledge worker produces knowledge, ideas, information. By themselves these "products" are useless. Somebody else, another man of knowledge, has to take them as his input and convert them into his output before they have any reality. The greatest wisdom not applied to action and behavior is meaningless data.

Knowledge work is not defined by quantity. Neither is knowledge work defined by its costs. Knowledge work is defined by its results.

Plan, organize, integrate, motivate, and measure.

The executive is effective only if and when other people make use of what he contributes. Organizations is a means of multiplying the strengths of an individual.

One has to record time before one know where it goes and before, in turn, one can attempt to manage it.

Systematic time management is therefore the next step. One has to find the nonproductive, time wasting activities and get rid of them if one possibly can.

Ask systematically: what do I do that wastes your time without contributing to your effectiveness.

We usually tend to overrate rather than underrate our importance and to conclude that far too many things can only be done by ourselves.

One should only have on a team the knowledge and skills that are needed day in and day out for the bulk of the work. Specialists that may be needed once in a while, or that may have to be consulted on this or that, should always remain outside.

Schedule all the operating work- meetings, reviews, problems-sessions, and so on - for two days a week, for example, Monday and Friday, and set aside the mornings of the remaining days for consistent, continuing work on major issues.

One still gives priority in one's mind and in one's schedule to the less important things, the things that have to done even though they contribute little.

The effective executive focus on contribution. He looks up from his work and outward toward goals. He asks: "what can I contribute that will significantly affect the performance and the results of the institution I serve?"

The man who focuses on contribution and who takes responsibility for the results, no matter how junior, is in the most literal sense of the phrase, "top management." He holds himself accountable for the performance of the whole.

Think through what relationships your skills, your specialty, your function or your department has to the entire organization and its purpose.

What is considered excellent performance in a good many positions is often but a pale shadow of the jobs full potential of contribution.

Executives who do not ask themselves, "What can I contribute?" are not only likely to aim too low, they are likely to aim at the wrong things. Above all, they may define their contribution too narrowly.

Every organization needs performance in three major areas: It needs direct results; building of values and their reaffirmation: and building and developing people for tomorrow.

Direct results of an organization are clearly visible. In a business, they are economic results such as sales and profits... And when there is confusion as to what they should be, there are no results.

There has to be something "this organization stands for," or else it degenerates into disorganization, confusion, and paralysis.

An organization has to provide today the men who can run it tomorrow. It should steadily upgrade its human resources. Establish a new "high: as the baseline for the generation after them.

People adjust to the level of demands made on them.

Commitment to contribution is commitment to responsible effectiveness. Without it, a man shortchanges himself, deprives his organization, and cheats the people he works with.

What can I and no one else do which, if done really well, would make a real difference to this company.

If a man wants to be an executive- that is, if he wants to be considered responsible for his contribution- he has to concern himself with the usability of his "product"- that is, his knowledge. Effective executives know this. For they are almost imperceptibly led by their upward orientation into finding out what the other fellow needs, what the other fellow sees, and what the other fellow understands.

Warm feelings and pleasant words are meaningless, are indeed a false front for wretched attitudes, if there is no achievement in what is, after all, a work-focused and task-focused relationship.

The focus on contribution by itself supplies the four basic requirements of effective human relations:

- Communications;
- Teamwork;
- Self Development; and,
- Development of others

People in general, and knowledge workers in particular, grow according to the demands they make on themselves.

If they demand a good deal of themselves, they will grow to giant stature- without any more effort than is expended by the nonachievers.

Effective executives know that their subordinates are paid to perform and not to please their superiors.

One cannot hire a hand- the whole man comes with it.

To tolerate diversity, relationships must be task-focused rather than personality-focused.

Make common people achieve uncommon performance.

“Potential” is simply another word for “promise”

All one can measure is performance. And all one should measure is performance.

One can measure the performance of a man only against specific performance expectations.

Ask 4 questions:

- What has he done well?
- What, therefore, is he likely to be able to do well?
- What does he have to learn or acquire to be able to get the full benefit from his strength
- If I had a son or daughter, would I be willing to have him or her work under his person
- If yes, why?
- If no, why?

The effective executive knows that to get strength one has to put up with weaknesses.

Never talk of a good man, abilities must be specific to produce performance. Always talk about a man who is “good” for some one task. Search for strength and staff for excellence.

Brice: Run swot analysis on staff?

What can this man do? Should be your constant question. And if a man could do something, his lacks become secondary.

People-decision is a gamble. By basing it on what a man can do, it becomes at least a rational gamble.

A superiors has responsibility for the work of others.

Make the strength of everyone of your subordinates as productive as it can be.

Ask yourself: “What can my boss do really well? What has he done really well? What does he need to know to use his strength? What does he need to get from me to perform? You do not need to worry too much over what the boss cannot do.

People are either readers or listeners. It is generally a waste of time to talk to a reader. He only listens after he has read. It is equally a waste of time to submit voluminous report to a listener. He can only grasp what it is all about through the spoken word.

Others need to be able to follow the thought processes of the man who makes the recommendation and therefore require a big report before anything becomes meaningful to them. Some superiors want to see sixty pages of figures on everything. Some want to be in the early stages so that they can prepare themselves for the eventual decision. Others do now to even hear about the matter until it is “ripe,” and so on.

Build on strength, make weaknesses irrelevant.

Some people work best if they have a detailed outline in front of them, that is, if they have thought through the job before they start it. Others work best with nothing more than a few rough notes. Some work best under pressure. Others work better if they have a good deal of time and can can finish the job long before the deadline. Some are readers, others listeners. All this one knows, about oneself-just as one knows whether one is right handed or left handed.

Ask yourself: what are thins that I seem to be able to do with relative ease, while they come rather hard to other people.

In every area of effectiveness within an organization, one feeds the opportunities and starves the problems.

Only strengths produces results

The distance between the leaders and the average is a constant. If leadership performance is high, the average will go up. The effective executive knows that it is easier to raise the performance of one leader than it is to raise the performance of a whole mass. He therefore makes sure that he puts into the leadership position, into the standard setting, the performance-making position, the man who has the strength to do the outstanding, the pace-setting job.

Multiply performance capacity of the whole by putting to use whatever strength, whatever health, whatever aspiration there is in individuals.

Focus on your strengths, what you can do not what you can;t. Only strengths produces results.

Switch from being busy to achieving results.

Commit today’s resources to the future.

One can at least try to limit one’s servitude to the past by cutting out those inherited activities and tasks that have ceased to produce results.

Yesterday successes, however, always linger on long beyond their productive life.

Systematic sloughing off of the old is the one and only way to force the new

Courage rather analysis dictates the truly important rules for identifying priorities:

- Pick the future as against the past;
- Focus on opportunity rather than on problem;
- Choose your own direction- rather than climb on the bandwagon; and
- Aim high, aim for something that will make a difference, rather than something that is “safe” and easy to do.

Depend less on the ability in doing research than on the courage to go after opportunity. Those research scientists who pick their projects according to the greatest likelihood of quick success rather than according to the challenge of the problem are unlikely to achieve distinction. They may turn out a great many footnotes, but neither a law of physics nor a new concept is likely to be named after them. Achievement goes to the people who pick their research priorities by the opportunity and who consider other criteria only as qualifiers rather than as determinants.

Similarly, in business the successful companies are not those that work at developing new products for their existing line but those that aim at innovating new technologies or new businesses. As a rule it is just as tricky, just as arduous, and just as uncertain to do something small that is new as it is to do something big that is new. It is more productive to convert an opportunity into results than to solve a problem- which only restores the equilibrium of yesterday

They want impact rather than technique, they want to be sound, rather than clever.

Organize the future to compete with the present

Be the creator of a different future and the enemy of today

The definition of the problem may be incomplete

Assume that the event that clamors for your attention is in reality a symptom. Do not be content with doctoring the symptom alone.
Try to put your solution on the highest possible conceptual level.

A country with many laws is a country of incompetent lawyers

Make clear specification as to what the decision has to accomplish. What are the objectives the decision has to reach.

Start out with, what is right rather than what is acceptable (let alone who is right). If one does not know what is right to satisfy the specifications and boundary conditions, one cannot distinguish between the right compromise and the wrong compromise- and will end up by making the wrong compromise.

No decision has been made unless carrying it out in specific steps has become someone’s work assignment and responsibility. Until then, there are only good intentions.

This is the trouble with so many policy statements, especially of business: They contain no action commitment. To carry them out is no one’s specific work and responsibility. No wonder that people in the organization tend to view these statements cynically if not declarations of what top management is really not going to do.

Everyone can think what action commitments a specific decision requires, what work assignments follow from it, and what people are available to carry it out.

Finally, a feedback has to be built into the decision to provide a continuous testing, against actual events, of the expectations that underlie the decision.

Decisions are made by men. Men are fallible; at their best their works do not last long. Even the best decision has a high probability of being wrong. Even the most effective one eventually becomes obsolete.

To go and look for one self is also the best, if not the only, way to test whether the assumption on which a decision had been made are still valid or whether they are becoming obsolete and need to be thought through again. And one always has to expect the assumptions to become obsolete sooner or later. Reality never stands still very long.

A decision is a judgement. It is a choice between alternatives. It is rarely a choice between right and wrong. It is at best a choice between “almost right” and “probably wrong”

We know what to do with hypotheses. One does not argue them; one tests them.

Testing the opinion against reality- would have to show.

The effective decision-maker assumes that the traditional measurement is not the right measurement.

Effective executives therefore insist on alternatives of measurement- so that they can choose the one appropriate one

Test opinions against facts and the need to make absolutely sure that one did not start out with the conclusion and look for the facts that would support it

The right decision demands adequate disagreement

Disagreement is needed to stimulate the imagination

Creative solutions which create a new situation. And this means that one needs imagination - a new and different way of perceiving and understanding.

Effective decision-maker, therefore organizes disagreement.

Most people start out with the certainty that what they see is the only way to see at all.

Executives are not paid for doing things they like to do. They are paid for getting the right things done- most of all in their specific task, the making of effective decisions.

Like all tools that do better something man can do, the computer multiplies man’s capacity... adds a new dimension to the man, i.e., extends his nature.

The executive is paid for being effective. He owes effectiveness to the organization for which he works for.

Far too much of result is mediocrity, far too much is splintering of efforts, far too much is devoted to yesterday to avoiding decision and action.

Schedule

Running: 40-50 Miles a week (5AM| M,T, W| 1hr-3hrs)
Biking: 100-200 miles a week (3:20AM | Th, Fr, S| 1hr-3hrs)
Zazen: 2 hours a week (3:20 AM, 8:20PM | M, W, |9PM| T, Th, Fr, S | 10 min)
Reading & Studying: 5hrs a week (5:15PM, 1hr M, T, W, Fr, S)
Work: 56 hours (9 AM-5 PM, M, T, W, Fr, S,| 7 hours)
Audiobook & Studying: 6 hours a week (Multitasking)
Weight Training: 6 hours a week (6AM| M, T, W, Th, Fr, S, |9AM| Su | 1hr)
Yoga: 4 hours a week (4AM | M, T, W |7:20PM| Fr, S | 30 min)
Core Training: 1.5 hours a week (3AM | M, T, W |7PM| W, Fr, S | 20 minutes)
Swimming: 2hr a week (7PM | T, Th)
Empty Collection Buckets

Monday 3:00 AM Core Training 3:20 AM Zazen 4:00 AM Yoga 5:00 AM Run 6:00 AM Weight Training 9AM-5PM Work 5:15 PM Study 7:20 PM Yoga 8:20 PM Zazen	Tuesday 3:00 AM Core Training 3:20 AM Zazen 4:00 AM Yoga 5:00 AM Run 6:00 AM Weight Training 9AM-5PM Work 5:15 PM Study 7:00 PM Swim 9:00 PM Zazen	Wednesday 3:00 AM Core Training 3:20 AM Zazen 4:00 AM Yoga 5:00 AM Run (Endurance) 6:00 AM Weight Training 9AM-5PM Work 5:15 PM Study 7:00 PM Core Training 8:20 PM Zazen
